Naked Ape Or Homo Sapiens:

Naked Ape Or Homo Sapiens? John Lewis, Bernard Towers, 1969 The Classical Marxist Critiques of Religion: Marx, Engels, Lenin, Kautsky D.B. McKown, 2012-12-06 In view of the enormous number of works on Marxism in general and in light of the many books and articles touching on the relationship of Marxism to religion in particular it may fairly be asked why yet another such work should be produced My reply is that in eliciting answers to the kinds of questions posed by the methodology I have used it was necessary to go to the primary sources almost exclusively This is not to bemoan a sad fate but to affirm that there are notable deficiencies in the secondary sources relevant to my topic By way of general indictment I contend that the major difficulty with existing studies of the Marxist critique of religion is that their authors whether expositors or critics have failed both to specify their own presuppositions concerning religion and to approach the subject with an adequate comprehension of its many dimensions Since in most cases the reader is equally unprepared anthropologically sociologically psychologically and historically for clear and informed thought in this vast and nebulous area the result has been widespread confusion As if this were not enough numerous writers with little more than polemical interests have compounded the confusion by failing to distinguish between religion in general and their own brands of faith in particular Others have not discriminated between the concepts of metaphysics and the supernatural items of religious belief Humans and their Nature Mariano L. Bianca, 2025-05-11 The nature of man and society are topics investigated by philosophers and scientists who have formulated theories to explain the birth of Homo Sapiens its evolution and civilization Throughout its chapters this book deals with cosmic and geological conditions that gave rise to Earth and the emergence of life analyzes Homo s character that has led to the development of civilizations with their negative and positive aspects considers different ways in which societies are founded examines Homo s role on Earth its relationship with other living beings and the ecological conditions and presents some aspects related to the future of Homo its survival the conquest of space and future social conditions with the presence of robots cyborgs and AI apparatuses This futuristic scenario includes the enhancement of Homo with genetic engineering This book adopts a multidisciplinary approach grounded on scientific data formulated by paleontology anthropology neurophysiology geology evolutionary biology and genetics and on the concept of eventualism so it allows us to formulate a global vision of Homo its birth evolution and its present and future condition

Killing the Koala and Poisoning the Prairie Corey J. A. Bradshaw, Paul R. Ehrlich, 2015-10-05 Though separated by thousands of miles the United States and Australia have much in common Geographically both countries are expansive the United States is the fourth largest in land mass and Australia the sixth and both possess a vast amount of natural biodiversity At the same time both nations are on a crash course toward environmental destruction Highly developed super consumers with enormous energy footprints and high rates of greenhouse gas emissions they are two of the biggest drivers of climate change per capita As renowned ecologists Corey J A Bradshaw and Paul R Ehrlich make clear in *Killing the Koala and Poisoning the Prairie* both of these countries must confront the urgent question of how to stem this devastation and turn back from the brink In this book Bradshaw and Ehrlich provide a spirited exploration of the ways in which the United States and Australia can learn from their shared problems and combine their most successful solutions in order to find and develop new resources lower energy consumption and waste and grapple with the dynamic effects of climate change Peppering the book with humor irreverence and extensive scientific knowledge the authors examine how residents of both countries have irrevocably altered their natural environments detailing the most pressing ecological issues of our time including the continuing resource depletion caused by overpopulation They then turn their discussion to the politics behind the failures of environmental policies in both nations and offer a blueprint for what must be dramatically changed to prevent worsening the environmental crisis Although focused on two nations *Killing the Koala and Poisoning the Prairie* clearly has global implications the problems facing the United States and Australia are not theirs alone and the solutions to come will benefit by being crafted in coalition This book provides a vital opportunity to learn from both countries leading environmental thinkers and to heed their call for a way forward together

Not Saved Peter

Sloterdijk,2017-05-23 One can rightly say of Peter Sloterdijk that each of his essays and lectures is also an unwritten book That is why the texts presented here which sketch a philosophical physiognomy of Martin Heidegger should also be characterized as a collected renunciation of exhaustiveness In order to situate Heidegger s thought in the history of ideas and problems Peter Sloterdijk approaches Heidegger s work with questions such as If Western philosophy emerged from the spirit of the polis what are we to make of the philosophical suitability of a man who never made a secret of his stubborn attachment to rural life Is there a provincial truth of which the cosmopolitan city knows nothing Is there a truth in country roads and cabins that would be able to undermine the universities with their standardized languages and globally influential discourses From where does this odd professor speak when from his professorial chair in Freiburg he claims to inquire into what lies beyond the history of Western metaphysics Sloterdijk also considers several other crucial twentieth century thinkers who provide some needed contrast for the philosophical physiognomy of Martin Heidegger A consideration of Niklas Luhmann as a kind of contemporary version of the Devil s Advocate a provocative critical interpretation of Theodor Adorno s philosophy that focuses on its theological underpinnings and which also includes reflections on the philosophical significance of hyperbole and a short sketch of the pessimistic thought of Emil Cioran all round out and deepen Sloterdijk s attempts to think with against and beyond Heidegger Finally in essays such as Domestication of Being and the Rules for the Human Park which incited an international controversy around the time of its publication and has been translated afresh for this volume Sloterdijk develops some of his most intriguing and important ideas on anthropogenesis humanism technology and genetic engineering

The Physiological Ecology of Vertebrates Brian Keith McNab,2002 Though physiological ecology has been a discipline since the 1950s McNab redresses a perceived absence of a theoretical framework with a comparative inductive approach to studying vertebrate evolution and ecology He discusses the patterns and limits of adaptation to the environment acclimation to temperature variation and material exchange with the environment and the energetics of locomotion and growth The final section treats the significance of energetics for population ecology and distribution Includes a taxonomic as well as subject index Suitable for advanced students and researchers in the biological and ecological sciences The Gainesville FL based author is referred to by the foreword writer as a keen naturalist but his credentials are not stated Annotation copyrighted by Book News Inc Portland OR

Scars of Evolution Elaine Morgan, 2012-04-01 In this lively and controversial book Elaine Morgan presents a challenging interpretation to the question of human evolution With brilliant logic she argues that our hominid ancestors began to evolve in response to an aquatic environment Millions of years ago something happened that caused our ancestors to walk on two legs to lose their fur to develop larger brains and learn how to speak Elaine Morgan discovers what this event was by studying the many incongruous flaws in the physiological make up of humans The human body is liable to suffer from obesity lower back pain and acne In support of her aquatic ape hypothesis she points out the flaws in our physiological make up the difficulties of erect bipedalism our hairlessness and fat layers our preference for face to face sex and the way we breathe Are these flaws a record of the history of the species the scars of evolution that are clues to earlier stages of evolution Morgan establishes the origins of the evolutionary path that separated humans from other animals and questions the theories currently accepted by science Did our ancestors adapt to an aquatic environment that subsequently dried out Elaine Morgan has made the Aquatic Ape Hypothesis a plausible alternative to conventional theories of evolution and in *The Scars of Evolution* she brings a real understanding of who humans are and where they came from
