Naming, Necessity, and Natural Kinds Stephen P. Schwartz, 1977      *Naming, Necessity, and Natural Kinds* Stephen P. Schwartz, 1977      *Natural Kinds and Conceptual Change* Joseph LaPorte, 2003-12-08 According to the received tradition the language used to refer to natural kinds in scientific discourse remains stable even as theories about these kinds are refined In this illuminating book Joseph LaPorte argues that scientists do not discover that sentences about natural kinds like Whales are mammals not fish are true rather than false Instead scientists find that these sentences were vague in the language of earlier speakers and they refine the meanings of the relevant natural kind terms to make the sentences true Hence scientists change the meaning of these terms This conclusion prompts LaPorte to examine the consequences of this change in meaning for the issue of incommensurability and for the progress of science This book will appeal to students and professional in the philosophy of science the philosophy of biology and the philosophy of language      The New Theory of Reference P. Humphreys, J.H. Fetzer, 1999-03-31 On January 20th 22nd and 29th 1970 Saul Kripke delivered three lectures at Princeton University They produced something of a sensation In the lectures he argued amongst other things that many names in ordinary language referred to objects directly rather than by means of associated descriptions that causal chains from language user to language user were an important mechanism for preserving reference that there were necessary a posteriori and contingent a priori truths that identity relations between rigid designators were necessary and argued more tentatively that materialist identity theories in the philosophy of mind were suspect Interspersed with this was a considerable amount of material on natural kind terms and essentialism As a result of these lectures and a related 1971 paper Identity and Necessity Kripke 1971 talk of rigid designators Hesperus and Phosphorus meter bars gold and H<sub>2</sub>O and suchlike quickly became commonplace in philosophical circles 2 and when the lectures were published under the title Naming and Necessity in the collection The Semantics of Natural Language Davidson and Harman 1972 that volume became the biggest seller in the Reidel later Kluwer list The cluster of theses surrounding the idea that a relation of direct reference 2 exists between names and their referents is now frequently referred to as The 3 New Theory of Reference      **Dialogue Concerning the Two Chief Approaches to a Science of Life** William T. Powers, Philip J. Runkel, 2010 Correspondence between William T Powers originator of Perceptual Control Theory PCT and Philip J Runkel professor of psychology and education at the University of Oregon 500 pages of original letters show how Phil Runkel reevaluated everything he knew about psychology This focused correspondence deals with the science or lack thereof and inappropriate methods used in psychology while introducing a new approach to a new natural science of psychology Enclosures that go with the letters are available on the web      A Nice Derangement of Epistemes John H. Zammito, 2004-02-15 Since the 1950s many philosophers of science have attacked positivism the theory that scientific knowledge is grounded in objective reality Reconstructing the history of these critiques John H Zammito argues that while so called postpositivist theories of science are very often invoked

they actually provide little support for fashionable postmodern approaches to science studies Zammito shows how problems that Quine and Kuhn saw in the philosophy of the natural sciences inspired a turn to the philosophy of language for resolution This linguistic turn led to claims that science needs to be situated in both historical and social contexts but the claims of recent science studies only deepened the philosophical quandary In essence Zammito argues that none of the problems with positivism provides the slightest justification for denigrating empirical inquiry and scientific practice delivering quite a blow to the discipline postmodern science studies Filling a gap in scholarship to date *A Nice Derangement of Epistemes* will appeal to historians philosophers of science and the broader scientific community *Forgery, Replica, Fiction* Christopher S. **Foundations Of Quantum Mechanics, The: Historical Analysis And Open Questions** Claudio Garola, Arcangelo Rossi, 2000-05-11 This volume provides a sample of the present research on the foundations of quantum mechanics and related topics by collecting the papers of the Italian scholars who attended the conference entitled The Foundations of Quantum Mechanics Historical Analysis and Open Questions Lecce 1998 The perspective of the book is interdisciplinary and hence philosophical historical and technical papers are gathered together so as to allow the reader to compare different viewpoints and cultural approaches Most of the papers confront directly or indirectly the objectivity problem taking into account the positions of the founders of QM or more recent developments More specifically the technical papers in the book pay special attention to the interpretation of the experiments on Bell's inequalities and to decoherence theory but topics on unsharp QM the consistent history approach quantum probability and alternative theories are also discussed Furthermore a number of historical and philosophical papers are devoted to Planck's Weyl's and Pauli's thought but topics such as quantum ontology predictivity of quantum laws etc are treated

**Metaphysics and the Origin of Species** Michael T. Ghiselin, 1997-01-01 In explaining his individuality thesis Michael T. Ghiselin provides extended discussions of such philosophical topics as definition the reality of various kinds of groups and how we classify traits and processes He develops and applies the implications for general biology and other sciences and makes the case that a better understanding of species and of classification in general puts biologists and paleontologists in a much better position to understand nature in general and such processes as extinction in particular *Logical and Ethical Issues* Bimal Krishna Matilal, 2004

*Concepts, Kinds, and Cognitive Development* Frank C. Keil, 1992-01-30 In *Concepts Kinds and Cognitive Development* Frank C. Keil provides a coherent account of how concepts and word meanings develop in children adding to our understanding of the representational nature of concepts and word meanings at all ages Keil argues that it is impossible to adequately understand the nature of conceptual representation without also considering the issue of learning Weaving

together issues in cognitive development philosophy and cognitive psychology he reconciles numerous theories backed by empirical evidence from nominal kinds studies natural kinds studies and studies of fundamental categorical distinctions He shows that all this evidence when put together leads to a better understanding of semantic and conceptual development The book opens with an analysis of the problems of modeling qualitative changes in conceptual development investigating how concepts of natural kinds nominal kinds and artifacts evolve The studies on nominal kinds document a powerful and unambiguous developmental pattern indicating a shift from a reliance on global tabulations of characteristic features to what appears to be a small set of defining ones The studies on natural kinds document an analogous shift toward a core theory instead of simple definition Both sets of studies are strongly supported by cross cultural data While these patterns seem to suggest that the young child organizes concepts according to characteristic features Keil argues that there is a framework of conceptual categories and causal beliefs that enables even very young children to understand kinds at a deeper theoretically guided level This account suggests a new way of understanding qualitative change and carries strong implications for how concepts are represented at any point in development A Bradford Book     *Neurolinguistics and Linguistic Aphasiology*

Linda Wetzel, 2009-07-31 A consideration of the distinction between the spatiotemporal furniture of the world tokens and the types of which they are instances and an argument that types exist There is a widely recognized but infrequently discussed distinction between the spatiotemporal furniture of the world tokens and the types of which they are instances Words come in both types and tokens for example there is only one word type the but there are numerous tokens of it on this page as do symphonies bears chess games and many other types of things In this book Linda Wetzel examines the distinction between types and tokens and argues that types exist as abstract objects since they lack a unique spatiotemporal location Wetzel demonstrates the ubiquity of references to and quantifications over types in science and ordinary language types have to be reckoned with and cannot simply be swept under the rug Wetzel argues that there are such things as types by undermining the epistemological arguments against abstract objects and offering extended original arguments demonstrating the failure of nominalistic attempts to paraphrase away such references to and quantifications over types She then focuses on the relation between types and their tokens especially for words showing for the first time that there is nothing that all tokens of a type need have in common other than being tokens of that type Finally she considers an often overlooked problem for realism having to do with types occurring in other types such as words in a sentence and proposes an important and original solution extending her discussion from words and expressions to other types that structurally involve other types flags and stars and stripes molecules and atoms sonatas and notes     Psychology of Learning and Motivation Douglas L.
