Characterization of Nanocomposites Frank Abdi, Mohit Garg, 2017-03-31 These days advanced multiscale hybrid materials are being produced in the industry studied by universities and used in several applications Unlike for macromaterials it is difficult to obtain the physical mechanical

electrical and thermal properties of nanomaterials because of the scale Designers however must have knowledge of these properties to perform any finite element analysis or durability and damage tolerance analysis This is the book that brings this knowledge within easy reach What makes the book unique is the fact that its approach that combines multiscale multiphysics and statistical analysis with multiscale progressive failure analysis The combination gives a very powerful tool for minimizing tests improving accuracy and understanding the effect of the statistical nature of materials in addition to the mechanics of advanced multiscale materials all the way to failure The book focuses on obtaining valid mechanical properties of nanocomposite materials by accurate prediction and observed physical tests as well as by evaluation of test anomalies of advanced multiscale nanocomposites containing nanoparticles of different shapes such as chopped fiber spherical and platelet in polymeric ceramic and metallic materials The prediction capability covers delamination fracture toughness impact resistance conductivity and fire resistance of nanocomposites The methodology employs a high fidelity procedure backed with comparison of predictions with test data for various types of static fatigue dynamic and crack growth problems Using the proposed approach a good correlation between the simulation and experimental data is established

Nanotube Superfiber Materials Brad Ruff, Weifeng Li, Rajiv Venkatasubramanian, David Mast, Anshuman Sowani, Mark Schulz, Timothy J. Harned, 2013-09-16 There are two ways to manufacture components and devices the top down and bottom up processes Each process has its advantages and disadvantages In our group the bottom up process was selected to build up electromagnetic devices using nanoscale materials in a series of steps The design of a lightweight electric motor is described based on using nanoscale materials Development of the motor is work in progress and various processes and results are described There are several potential applications for lightweight sustainable electric motors One billion electric motors are produced in the world each year

Nanotube Superfiber Materials Rachit Malik, Noe Alvarez, Mark Haase, Brad Ruff, Yi Song, Bolaji Suberu, Duke Shereen, David Mast, Andrew Gilpin, Mark Schulz, Vesselin Shanov, 2013-09-16 Individual carbon nanotubes CNTs have exceptional mechanical and electrical properties However the transfer of these extraordinary qualities into CNT products without compromising performance remains a challenge This chapter presents an overview of the manufacturing of CNT sheets and buckypaper and also describes research performed at the University of Cincinnati in this field CNT arrays were grown using the chemical vapor deposition method Sheets were drawn from the spinnable CNT arrays and characterized using scanning electron microscopy to show the highly unidirectional alignment of the nanotubes in the sheet The anisotropic morphology of the sheet provides superior properties along one material axis as observed by measuring the tensile strength electrical resistivity optical transmittance and electromagnetic interference shielding properties of the material Surface modification of aligned multiwall nanotube sheets was carried out via incorporation of an atmospheric pressure plasma jet in the sheet posttreatment process Helium oxygen plasma was utilized to produce carboxyl COO functionality on the surface of the nanotubes X ray photoelectron spectroscopy confirmed the presence of the functional

groups on the nanotube surface The sheet was further characterized using Raman spectroscopy Fourier transform infrared spectroscopy and contact angle testing Composite laminates made from functionalized CNT sheets showed higher strength than those made with pristine sheets The effects of plasma power and oxygen concentration were studied in order to determine the best possible parameters for functionalization Plasma treatment is a useful tool for fast clean and dry functionalization of CNTs This study demonstrates the ease of incorporating the plasma tool in the manufacturing process of sheets leading to the production of CNT polymer composites Macroscopic structures of nanotubes such as threads and sheets are leading to novel applications
