The Wisdom of the Bones Alan Walker, Pat Shipman, 1997-09-02 Fascinating As engaging an explanation of how scientists study fossil bones as any I have ever read John R Alden Philadelphia Inquirer In 1984 a team of paleoanthropologists on a dig in northern Kenya found something extraordinary a nearly complete skeleton of Homo erectus a creature that lived 1 5 million years ago and is widely thought to be the missing link between apes and humans The remains belonged to a tall rangy adolescent male The researchers called him Nariokotome boy In this immensely lively book Alan Walker one of the lead researchers and his wife and fellow scientist Pat Shipman tell the story of that epochal find and reveal what it tells us about our earliest ancestors We learn that Nariokotome boy was a highly social predator who walked upright but lacked the capacity for speech In leading us to these conclusions The Wisdom of the Bones also offers an engaging chronicle of the hundred year long search for a missing link a saga of folly heroic dedication and inspired science Brilliantly captures an intellectual odyssey One of the finest examples of a practicing scientist writing for a popular audience Portland Oregonian A vivid insider s perspective on the global efforts to document our own ancestry Richard E Leakey

*Out of Africa I*

John G Fleagle, John J. Shea, Frederick E. Grine, Andrea L. Baden, Richard E. Leakey, 2010-08-20 For the first two thirds of our evolutionary history we hominins were restricted to Africa Dating from about two million years ago hominin fossils first appear in Eurasia This volume addresses many of the issues surrounding this initial hominin intercontinental dispersal Why did hominins first leave Africa in the early Pleistocene and not earlier What do we know about the adaptations of the hominins that dispersed their diet locomotor abilities cultural abilities Was there a single dispersal event or several Was the hominin dispersal part of a broader faunal expansion of African mammals northward What route or routes did dispersing populations take

**The Origin and Evolution of Humans and Humanness** D. Tab Rasmussen, 1993 This volume represents the proceedings of the Irving

Stone Memorial Symposium on The Origin of Humans and Humanness Scientists in the fields of anthropology archaeology biology and ecology were invited to discuss their research concerning the how s where s and why s of the evolutionary history of humans Using our knowledge of the behavior and reproduction of living primates chapter 1 describes what made the earliest human like animals of 4 million years ago different from their ape relatives While showing how the science of paleontology works the origin of our genus Homo is discussed in chapter 2 With emphasis on those humans who first made regular use of stone tools some 2 million years ago chapter 3 interprets ancient human behavior and ecology from an archeological perspective Tools from genetics molecular biology archaeology and paleontology are used to examine the origin of modern Homo sapiens in chapter 4 Chapter 5 looks at the artistry of Ice Age craftsmen Finally using computer methods chapter 6 delves into the complex issue of how does human behavior change and what is the relationship between biological and cultural evolution

**Spinal Evolution** Ella Been, Asier Gómez-Olivencia, Patricia Ann Kramer, 2019-08-07 The vertebral spine is a key element of the human anatomy Its main role is to protect the spinal cord and the main blood vessels The axial skeleton with its muscles and joints provides stability for the attachment of the head tail and limbs and at the same time enables the mobility required for breathing and for locomotion Despite its great importance the vertebral spine is often over looked by researchers because a vertebrae are fragile in nature which makes their fossilization a rare event b they are metameric seriated and repeated elements that make their anatomical determination and thus their subsequent study difficult and c the plethora of bones and joints involved in every movement or function of the axial skeleton makes the reconstruction of posture breathing mechanics and locomotion extremely difficult It is well established that the spine has changed dramatically during human evolution Spinal curvatures spinal load transmission and thoracic shape of bipedal humans are derived among hominoids Yet there are many debates as to how and when these changes occurred and to their phylogenetic functional and pathological implications In recent years renewed interest arose in the axial skeleton New and exciting finds mostly from Europe and Africa as well as new methods for reconstructing the spine have been introduced to the research community New methodologies such as Finite Element Analysis trabecular bone analysis Geometric Morphometric analysis and gait analysis have been applied to the spines of primates and humans These provide a new and refreshing look into the evolution of the spine Advanced biomechanical research regarding posture range of motion stability and attenuation of the human spine has interesting evolutionary implications Until now no book that summarizes the updated research and knowledge regarding spinal evolution in hominoids has been available The present book explores both these

new methodologies and new data including recent fossil morphological biomechanical and theoretical advances regarding vertebral column evolution In order to cover all of that data we divide the book into four parts 1 the spine of hominoids 2 the vertebral spine of extinct hominins 3 ontogeny biomechanics and pathology of the human spine and 4 new methodologies of spinal research These parts complement each other and provide a wide and comprehensive examination of spinal evolution

*Behaviour in our Bones* Cara S. Hirst, Rebecca J. Gilmour, Francisca Alves Cardoso, Kimberly A. Plomp, 2023-02-07

Exploring behaviour through bones has always been a fascinating topic to those that study human remains Human bodies record and store vast amounts of information about the way we move where we live and our experiences of health and socioeconomic circumstances We see it every day and experience it but when it comes to past populations understanding behaviour is largely mediated by our ability to read it in bones *Behaviour in Our Bones* How Human Behaviour Influences Skeletal Morphology examines how human physical and cultural actions and interactions can be read through careful analyses of skeletal human remains This book synthesises the latest research on reconstructing behaviour in the past Each chapter is dedicated to a specific region of the human body guiding the reader from head to toe and highlighting how evidence found on the skull shoulder thorax spine pelvis and the upper and lower limbs has been used to infer patterns of activity and other behaviour Chapter authors expertly summarise and critically discuss a range of methodological theoretical and interpretive approaches used to read skeletal remains and interpret a wide variety of behaviours including tool use locomotion reproduction health pathology and beyond Serves as a comprehensive resource for readers who are new to human skeletal behaviour investigations Offers an overview on how behaviour may impact the entire skeleton from head to toe Discusses activities that can leave evidence on the human skeleton and how behaviour can become incorporated in bone Introduces methods that biological anthropologists use to quantify and interpret skeletal evidence for behaviour and its range of morphological variation Critically examines the current state of skeletal behaviour research and provides recommendations for future work in this field

**Was Man More Aquatic in the Past? Fifty Years After Alister Hardy - Waterside Hypotheses of Human Evolution** Mario Vaneechoutte, Algis Kuliukas, Marc Verhaegen, 2011 The book starts from the observation that humans are very different from the other primates Why are we naked Why do we speak Why do we walk upright Fifty years ago in 1960 marine biologist Sir Alister Hardy tried to answer this when he announced his so called aquatic hypothesis human ancestors did not live in dry savannahs as traditional anthropology assumes but have adapted to live at the edge between land and water gathering both terrestrial and aquatic foods This eBook is an up to date collection of the views of the most important protagonists of this long neglected theory of human evolution

and musical behavior across cultures In this groundbreaking book musicologists biologists anthropologists archaeologists psychologists neuroscientists ethologists and linguists come together for the first time to examine these and related issues The book can be viewed as representing the birth of evolutionary biomusicology the study of which will contribute greatly to our understanding of the evolutionary precursors of human music the evolution of the hominid vocal tract localization of brain function the structure of acoustic communication signals symbolic gesture emotional manipulation through sound self expression creativity the human affinity for the spiritual and the human attachment to music itself Contributors Simha Arom Derek Bickerton Steven Brown Ellen Dissanayake Dean Falk David W Frayer Walter Freeman Thomas Geissmann Marc D Hauser Michel Imberty Harry Jerison Drago Kunej Francois Bernard Mche Peter Marler Björn Merker Geoffrey Miller Jean Molino Bruno Nettl Chris Nicolay Katharine Payne Bruce Richman Peter J B Slater Peter Todd Sandra Trehub Ivan Turk Maria Ujhelyi Nils L Wallin Carol Whaling

**The Oxford Handbook of Evolutionary Medicine** Martin Brüne, Wulf Schiefenhövel, 2019-01-31 Medicine is grounded in the natural sciences where biology stands out with regard to our understanding of human physiology and the conditions that cause dysfunction Ironically though evolutionary biology is a relatively disregarded field One reason for this omission is that evolution is deemed a slow process Indeed the macroanatomical features of our species have changed very little in the last 300 000 years A more detailed look however reveals that novel ecological contingencies partly in relation to cultural evolution have brought about subtle changes pertaining to metabolism and immunology including adaptations to dietary innovations as well as adaptations to the exposure to novel pathogens Rapid pathogen evolution and evolution of cancer cells cause major problems for the immune system Moreover many adaptations to past ecologies have actually turned into risk factors for somatic disease and psychological disorder in our modern worlds i e mismatch among which epidemics of autoimmune diseases cardiovascular diseases diabetes and obesity as well as several forms of cancer stand out One could add depression anxiety and other psychiatric conditions to the list The Oxford Handbook of Evolutionary Medicine is a compilation of up to date insights into the evolutionary history of ourselves as a species exploring how and why our evolved design may convey vulnerability to disease Written in a classic textbook style emphasising physiology and pathophysiology of all major organ systems the Oxford Handbook of Evolutionary Medicine is valuable reading for students as well as scholars in the fields of medicine biology anthropology and psychology

The Postcranial Anatomy of Australopithecus afarensis Yohannes Haile-Selassie, Denise F. Su, 2015-12-22 This volume describes a 3.6 million years old partial skeleton of Australopithecus afarensis from the Woranso Mille central Afar Ethiopia This specimen is the first adult partial skeleton to be recovered since Lucy's AL 288-1 discovery in 1974 It is older than Lucy by 400 000 years and sheds light on the paleobiology of early Australopithecus afarensis particularly the morphology of the shoulder girdle and thoracic shape which are thus far poorly understood and actively

debated The fauna associated with the partial skeleton tells us enormously about *Au afarensis* paleoecology and give us another piece of the puzzle regarding habitat availability and use for *Au afarensis* outside the Hadar region where it has been well known for the last four decades
