**The Future of Post-Human Transportation** Peter Baofu, 2013-01-03 Can transportation really have such a destructive impact on society that as Jay Holtz Kay 1998 once forcefully wrote with the automobile industry as an example that the modern consequences of heavy automotive use contribute to the use of non renewable fuels a dramatic increase in the rate of accidental death social isolation the disconnection of community the rise in obesity the generation of air and noise pollution urban sprawl and urban decay WK 2012 This negative expectation from transportation with the automobile industry as an example here can be contrasted with an opposing positive expectation in the old glory days when as Skip McGoun 2012 thus reminded us we have sung songs

about the glory and wonder that surrounds the very concept of the car Examples of this range from the 1909 tune In My Merry Oldsmobile to what is considered to be the first rock and roll song Rocket 88 in 1949 Motion pictures have portrayed expensive sleek sports cars associated with wealth and success One commercial described Hell as being a place where a teenager would have to drive a minivan Contrary to these opposing expectations and other views as will be discussed in the book transportation in relation to both networks and operations is neither possible or impossible nor desirable or undesirable to the extent that the respective ideologues on different sides would like us to believe This challenge to the opposing expectations from transportation does not mean that transportation is useless or that those interdisciplinary fields related to transportation studies like urban planning environmental sustainability migration tourism transport economics traffic engineering transportation technology energy efficiency the tragedy of the commons and so on are unimportant Needless to say neither of these extreme views is reasonable Rather this book offers an alternative better way to understand the future of transportation especially in the dialectic context of networks and operations while learning from different approaches in the literature but without favoring any one of them or integrating them since they are not necessarily compatible with each other More specifically this book offers a new theory that is the panoramic theory of transportation to go beyond the existing approaches in a novel way If successful this seminal project is to fundamentally change the way that we think about transportation in relation to networks and operations from the combined perspectives of the mind nature society and culture with enormous implications for the human future and what the author originally called its post human fate

Clean Disruption of Energy and Transportation Tony Seba,2014-06-27 The industrial age of energy and transportation will be over by 2030 Maybe before Exponentially improving technologies such as solar electric vehicles and autonomous self driving cars will disrupt and sweep away the energy and transportation industries as we know it The same Silicon Valley ecosystem that created bit based technologies that have disrupted atom based industries is now creating bit and electron based technologies that will disrupt atom based energy industries Clean Disruption projections based on technology cost curves business model innovation as well as product innovation show that by 2030 All new energy will be provided by solar or wind All new mass market vehicles will be electric All of these vehicles will be autonomous self driving or semi autonomous The new car market will shrink by 80% Even assuming that EVs don t kill the gasoline car by 2030 the self driving car will shrink the new car market by 80% Gasoline will be obsolete Nuclear is already obsolete Up to 80% of highways will be redundant Up to 80% of

parking spaces will be redundant The concept of individual car ownership will be obsolete The Car Insurance industry will be disrupted The Stone Age did not end because we ran out of rocks It ended because a disruptive technology ushered in the Bronze Age The era of centralized command and control extraction resource based energy sources oil gas coal and nuclear will not end because we run out of petroleum natural gas coal or uranium It will end because these energy sources the business models they employ and the products that sustain them will be disrupted by superior technologies product architectures and business models This is a technology based disruption reminiscent of how the cell phone Internet and personal computer swept away industries such as landline telephony publishing and mainframe computers Just like those technology disruptions flipped the architecture of information and brought abundant cheap and participatory information the clean disruption will flip the architecture of energy and bring abundant cheap and participatory energy Just like those previous technology disruptions the Clean Disruption is inevitable and it will be swift The History of Motor Sport David Hassan,2014-01-02 First published in 2012 This book examines the evolution of motor sport from its creation in central Europe throughout the rest of the continent and elsewhere including in both North and South America It was published as a special issue of the International Journal of the History of Sport **Departments of Transportation, and Housing and Urban Development, and Related Agencies Appropriations for 2011, Part 3, 111-2 Hearings, \***,2010
