*Radar Scattering from Modulated Wind Waves* G.J. Komen, W.A. Oost, 2012-12-06 Ten years ago de Loor and co workers at TNO The Netherlands were the first to report bottom topography patterns in real aperture radar RAR images of the southern North Sea At that time this was a real puzzle The skin depth of microwaves for sea water is only of the order of centimeters while the sea bottom is about 20 meters below the surface Electromagnetic radiation therefore cannot probe the bottom directly Similar phenomena were found in radar imagery from SEASAT and SIR ALB synthetic aperture radars SAR s of Nantucket Shoals the English Channel and many other coastal areas Since then theory and ocean field experiments Le Phelps Bank Georgia Straits SARSEX TOWARD FASINEX etc have advanced our understanding considerably We now know that these surface signatures are the results of surface currents perturbed by the bottom topography which refract the propagation and modulate the energy of short surface waves so as to cause microwave backscatter power variations Hence any large scale ocean features containing nonuniform surface currents i e internal waves eddies fronts etc will cause similar manifestations in the radar imagery by means of current wave microwave interactions Observations confirm this

**Measuring Ocean Currents** Antony Joseph,2013-08-12 *Measuring Ocean Currents Tools Technologies and Data* covers all major aspects of ocean current measurements in view of the implications of ocean currents on changing climate increasing pollution levels and offshore engineering activities Although more than 70% of the Earth is covered by ocean there is limited information on the countless fine to large scale water motions taking place within them This book fills that information gap as the first work that summarizes the state of the art methods and instruments used for surface subsurface and abyssal ocean current measurements Readers of this book will find a wealth of information on Lagrangian measurements horizontal mapping imaging Eulerian measurements and vertical profiling techniques In addition the book

describes modern technologies for remote measurement of ocean currents and their signatures including HF Doppler radar systems satellite borne sensors ocean acoustic tomography and more Crucial aspects of ocean currents are described in detail as well including dispersion of effluents discharged into the sea and transport of beneficial materials as well as environmentally hazardous materials from one region to another The book highlights several important practical applications showing how measurements relate to climate change and pollution levels how they affect coastal and offshore engineering activities and how they can aid in tsunami detection Coverage of measurement mapping and profiling techniques
