Radiant Cool A Novel Theory Of Consciousness:

Radiant Cool Dan Edward Lloyd, 2004 An innovative theory of consciousness drawing on the phenomenology of Edmund Husserl and supported by brain imaging presented in the form of a hardboiled detective story Professor Grue is dead or is he When graduate student sleuth Miranda Sharpe discovers him slumped over his keyboard she does the sensible thing she grabs her dissertation and runs Little does she suspect that soon she will be probing the heart of two mysteries trying to discover what happened to Max Grue and trying to solve the profound neurophilosophical problem of consciousness Radiant Cool may be the first novel of ideas that actually breaks new theoretical ground as Dan Lloyd uses a neo noir neuro noir hard boiled framework to propose a new theory of consciousness In the course of her sleuthing Miranda encounters characters who share her urgency to get to the bottom of the mystery of consciousness although not always with the most innocent motives Who holds the key to Max Grue s ultimate vision Is it the computer inspired pop psychologist talk show host The video gaming geek with a passion for artificial neural networks The Russian multi dimensional data detective or the sophisticated neuroscientist with the big book contract Ultimately Miranda teams up with the author s fictional alter ego Dan Lloyd and together they build on the phenomenological theories of philosopher Edmund Husserl 1859 1938 to construct testable hypotheses about the implementation of consciousness in the brain Will the clues of phenomenology and neuroscience converge in time to avert a catastrophe The dramatic ending cannot be revealed here Outside the fictional world of the novel Dan Lloyd the author appends a lengthy afterword explaining the proposed theory of consciousness in more scholarly form Radiant Cool is a real metaphysical thriller based in current philosophy of mind and a genuine scientific detective story revealing a new interpretation of functional brain imaging With its ingenious plot and its novel theory Radiant Cool will be enjoyed in the classroom and the study for its entertaining presentation of phenomenology neural networks and brain imaging but most importantly it will find its place as a groundbreaking theory of consciousness

Gestural Communication in Nonhuman and Human Primates Katja Liebal, Cornelia

Müller, Simone Pika, 2007-11-21 Research into gestures represents a multifaceted field comprising a wide range of disciplines and research topics varying methods and approaches and even different species such as humans apes and monkeys The aim of this volume originally published as a Special Issue of *Gesture* 5 1 2 2005 is to bring together the research in gestural communication in both nonhuman and human primates and to explore the potential of a comparative approach and its contribution to the question of an evolutionary scenario in which gestures play a significant role The topics covered include the spontaneous natural gesture use in social groups of apes and monkeys but also during interactions with humans gestures of preverbal children and their interaction with language speech accompanying gestures in humans as well as the use of sign language in human and nonhuman great apes It addresses researchers with a background in Psychology Primatology Linguistics and Anthropology but it might also function as an introduction and a documentation state of the art for a wider less specialised audience which is fascinated by the role gestures might have played in the evolution of human language

Towards a History of Consciousness Vwadek P. Marciniak, 2006 *Towards a History of Consciousness* Space Time and Death offers a cogent and compelling discussion of the neglected topic of the history of consciousness An analysis of our postmodern ontology reveals deep but neglected roots What are those roots and how did they grow Is there a self without consciousness What is the relation of the self to the individual Does the recognition of death contribute to the growth of consciousness As a survey of western history this work pushes the boundaries of the understanding of consciousness in intriguing and sometimes provocative directions This integrative study is intended for the serious curious student and thinker

Self-representational Approaches to Consciousness Uriah Kriegel, Kenneth Williford, 2006 Leading theorists examine the self representational theory of consciousness as an alternative to the two dominant reductive theories of consciousness the representational theory of consciousness and the higher order monitoring theory In this pioneering collection of essays leading theorists examine the self representational theory of consciousness which holds that consciousness always involves

some form of self awareness The self representational theory of consciousness stands as an alternative to the two dominant reductive theories of consciousness the representational theory of consciousness RTC and the higher order monitoring HOM theory combining elements of both RTC and HOM theory in a novel fashion that may avoid the fundamental deficiencies of each Although self representationalist views have been common throughout the history of both Western and Eastern philosophy they have been largely neglected in the recent literature on consciousness This book approaches the self representational theory from a range of perspectives with contributions from scholars in analytic philosophy phenomenology and history of philosophy as well as two longer essays by Antonio Damasio and David Rudrauf and Douglas Hofstadter The book opens with six essays that argue broadly in favor of self representationalist views which are followed by five that argue broadly against them Contributors next consider connections to such philosophical issues as the nature of propositional attitudes knowledge attention and indexical reference Finally Damasio and Rudrauf link consciousness as lived with consciousness as described in neurobiological terms and Hofstadter compares consciousness to the strange loop of mathematical self reference brought to light by G del s incompleteness theorems Contributors Andrew Brook Peter Carruthers Antonio Damasio John J Drummond Jason Ford Rocco J Gennaro George Graham Christopher S Hill Douglas R Hofstadter Terry Horgan Tomis Kapitan Uriah Kriegel Keith Lehrer Joseph Levine Robert W Lurz David Rudrauf David Woodruff Smith John Tienson Robert Van Gulick Kathleen Wider Kenneth Williford Dan Zahavi

What is mind What is its relationship to the physical world Is consciousness a causative agent in the physical world With much progress being made in the neurosciences many have thought that these questions could be answered by reducing them to questions about physical systems such as the brain But this approach has foundered on the core problem of consciousness Why is it that some brain processes are accompanied by conscious awareness This anthology points out new sources and unexamined paths of consciousness research By presenting a wide spectrum of non reductive theories the volume endeavours to overcome the dichotomy between dualism and monism that keeps plaguing the debate in favour of new and more differentiated positions **The Philosophy of Mind** Dale Jacquette,2009-04-23 In Philosophy of Mind The

Metaphysics of Consciousness Dale Jacquette provides students and professionals with a concise and accessible overview of this fascinating subject The book covers all the key topics and debates in the philosophy of mind and introduces the full range of choices available in approaching the mind body problem Exploring classical and contemporary texts the book surveys the subject s historical background and current applications Crucially Jacquette offers a defence of property dualism as an alternative solution to the mind body problem instead of the mainstream eliminativist and reductivist strategies Clearly structured and featuring useful diagrams a glossary of key terms and advice on further reading the book is ideal for classroom use Fully revised updated and expanded to meet the needs of a new generation of philosophy students this second edition is the ideal companion to the study of the philosophy of mind Altered States of Consciousness Marc

Wittmann,2023-11-07 What altered states of consciousness the dissolution of feelings of time and self can tell us about the mystery of consciousness During extraordinary moments of consciousness shock meditative states and sudden mystical revelations out of body experiences or drug intoxication our senses of time and self are altered we may even feel time and self dissolving These experiences have long been ignored by mainstream science or considered crazy fantasies Recent research however has located the neural underpinnings of these altered states of mind In this book neuropsychologist Marc Wittmann shows how experiences that disturb or widen our everyday understanding of the self can help solve the mystery of consciousness Wittmann explains that the relationship between consciousness of time and consciousness of self is close in extreme circumstances the experiences of space and self intensify and weaken together He considers the emergence of the

self in waking life and dreams how our sense of time is distorted by extreme situations ranging from terror to mystical enlightenment the experience of the moment and the loss of time and self in such disorders as depression schizophrenia and epilepsy Dostoyevsky reported godly bliss during epileptic seizures neurologists are now investigating the phenomenon of the epileptic aura Wittmann describes new studies of psychedelics that show how the brain builds consciousness of self and time and discusses pilot programs that use hallucinogens to treat severe depression anxiety and addiction If we want to understand our consciousness our subjectivity Wittmann argues we must not be afraid to break new ground Studying altered states of consciousness leads us directly to the heart of the matter time and self the foundations of consciousness

Cartographies of the Mind Massimo Marraffa, Mario De Caro, Francesco Ferretti, 2007-06-04 In the last three decades the level of interaction between philosophy and psychology has increased dramatically As a contribution to this trend this book explores some areas in which this interaction has been very productive or at least highly provocative The interaction between philosophy and psychology can be of different kinds For example psychology can be the subject for philosophy of science In such a case the philosopher of science pursues the usual set of issues explanation reduction etc within the special case of psychology Or philosophy can be the source of proposals for improving psychology Vice versa the findings of psychology can be used to criticize philosophical theories and suggest ways to resolve some traditional philosophical questions about the mind such as the nature of mental representation perception emotion memory consciousness and free will The chapters in this book reflect these different forms of interaction in an effort to clarify issues and debates concerning some traditional cognitive capacities The result is a philosophically and scientifically up to date collection of cartographies of the mind

Handbook of Phenomenology and Cognitive Science Daniel Schmicking, Shaun Gallagher, 2009-12-16 This volume explores the essential issues involved in bringing phenomenology together with the cognitive sciences and provides some examples of research located at the intersection of these disciplines The topics addressed here cover a lot of ground including questions about naturalizing phenomenology the precise methods of phenomenology and how they can be used in the empirical cognitive sciences specific analyses of perception attention emotion imagination embodied movement action and agency representation and cognition inters jectivity language and metaphor In addition there are chapters that focus on empirical experiments involving psychophysics perception and neuro and psychopathologies The idea that phenomenology understood as a philosophical approach taken by thinkers like Husserl Heidegger Sartre Merleau Ponty and others can offer a positive contribution to the cognitive sciences is a relatively recent idea Prior to the 1990s phenomenology was employed in a critique of the first wave of cognitivist and computational approaches to the mind see Dreyfus 1972 What some consider a second wave in cognitive science with emphasis on connectionism and neuroscience opened up possibilities for phenomenological intervention in a more positive way resulting in proposals like neurophenomenology Varela 1996 Thus brain imaging technologies can turn to phenomenological insights to guide experimentation see e g Jack and Roepstorff 2003 Gallagher and Zahavi 2008

The Routledge Handbook of Phenomenology and Phenomenological Philosophy Daniele De Santis, Burt C. Hopkins, Claudio Majolino, 2020-08-24 Phenomenology was one of the twentieth century's major philosophical movements and it continues to be a vibrant and widely studied subject today with relevance beyond philosophy in areas such as medicine and cognitive sciences The Routledge Handbook of Phenomenology and Phenomenological Philosophy is an outstanding guide to this important and fascinating topic Its focus on phenomenology's historical and systematic dimensions makes it a unique and valuable reference source Moreover its innovative approach includes entries that don't simply reflect the state of the art but in many cases advance it Comprising seventy five chapters by a team of international contributors the Handbook offers unparalleled coverage and discussion of the subject and is divided into five clear parts Phenomenology and the history of philosophy Issues and concepts in phenomenology Major figures in phenomenology Intersections Phenomenology in the world Essential reading for students and researchers in philosophy studying phenomenology The Routledge Handbook of Phenomenology and Phenomenological Philosophy is also suitable for those in related disciplines such as psychology religion literature sociology and anthropology

Distributed Cognition and the Will Don Ross, 2007 Philosophers and behavioral scientists discuss what if anything of the traditional concept of individual conscious will can survive recent scientific discoveries that human decision making is distributed across different brain processes and through the social environment Recent scientific findings about human decision making would seem to threaten the traditional concept of the individual conscious will The will is threatened from below by the discovery that our apparently spontaneous

actions are actually controlled and initiated from below the level of our conscious awareness and from above by the recognition that we adapt our actions according to social dynamics of which we are seldom aware In Distributed Cognition and the Will leading philosophers and behavioral scientists consider how much if anything of the traditional concept of the individual conscious will survives these discoveries and they assess the implications for our sense of freedom and responsibility The contributors all take science seriously and they are inspired by the idea that apparent threats to the cogency of the idea of will might instead become the basis of its reemergence as a scientific subject They consider macro scale issues of society and culture the micro scale dynamics of the mind brain and connections between macro scale and micro scale phenomena in the self guidance and self regulation of personal behavior Contributors George Ainslie Wayne Christensen Andy Clark Paul Sheldon Davies Daniel C Dennett Lawrence A Lengbeyer Dan Lloyd Philip Pettit Don Ross Tamler Sommers Betsy Sparrow Mariam Thalos Jeffrey B Vancouver Daniel M Wegner Tadeusz W Zawidzki The Neural Imagination Irving Massey, 2012-11-29 Art and technology have been converging rapidly in the past few years an important example of this convergence is the alliance of neuroscience with aesthetics which has produced the new field of neuroaesthetics Irving Massey examines this alliance in large part to allay the fears of artists and audiences alike that brain science may explain away the arts The first part of the book shows how neuroscience can enhance our understanding of certain features of art The second part of the book illustrates a humanistic approach to the arts it is written entirely without recourse to neuroscience in order to show the differences in methodology between the two approaches The humanistic style is marked particularly by immersion in the individual work and by evaluation rather than by detachment in the search for generalizations In the final section Massey argues that despite these differences once the reality of imagination is accepted neuroscience can be seen as the collaborator not the inquisitor of the arts **Deep History, Secular Theory** Luther Martin, 2014-05-21 Over the course of his career Luther H Martin has primarily produced articles rather than monographs This approach to publication has given him the opportunity to experiment with different methodological approaches to an academic study of religion with updates to and different interpretations of his field of historical specialization namely Hellenistic religions the subject of his only monograph 1987 The contents of this collected volume represent Martin s shift from comparative studies to socio political studies to scientific studies of religion and especially to the cognitive science of religion He currently considers the latter to be the most viable approach for a scientific study of religion within the academic context of a modern research university The twenty five contributions collected in this volume are selected from over one hundred essays articles and book chapters published over a long and industrious career and are representative of Martin s work over the past two decades **Musical Sense-Making** Mark Reybrouck, 2020-11-29 Musical Sense Making Enaction Experience and Computation broadens the scope of musical sense making from a disembodied cognitivist approach to an experiential approach Revolving around the definition of music as a temporal and sounding art it argues for an interactional

and experiential approach that brings together the richness of sensory experience and principles of cognitive economy. Starting from the major distinction between in time and outside of time processing of the sounds, this volume provides a conceptual and operational framework for dealing with sounds in a real time listening situation, relying heavily on the theoretical groundings of ecology, cybernetics, and systems theory, and stressing the role of epistemic interactions with the sounds. These interactions are considered from different perspectives, bringing together insights from previous theoretical groundings and more recent empirical research. The author's findings are framed within the context of the broader field of enactive and embodied cognition, recent action and perception studies, and the emerging field of neurophenomenology and dynamical systems theory. This volume will particularly appeal to scholars and researchers interested in the intersection between music philosophy and psychology.
