**Journal of the National Cancer Institute** , 2000-05 *Appropriate Use of Advanced Technologies for Radiation Therapy and Surgery in*

*Oncology* National Academies of Sciences, Engineering, and Medicine, Institute of Medicine, Board on Health Care Services, National Cancer Policy Forum, 2016-04-16 In recent years the field of oncology has witnessed a number of technological advances including more precise radiation therapy and minimally invasive surgical techniques Three dimensional 3D stereotactic and proton beam radiation therapy as well as laparoscopy and robotic surgery can enhance clinician's ability to treat conditions that were clinically challenging with conventional technologies and may improve clinical outcomes or reduce treatment related problems for some patients Both patients and physicians seek access to these new technologies which are rapidly being adopted into standard clinical practice Such demand is often propelled by marketing that portrays the new technologies as the latest and greatest treatments available However evidence is often lacking to support these claims and these novel technologies usually come with higher price tags and are often used to treat patients who might have achieved similar benefits from less expensive conventional treatment The increased cost of novel treatments without adequate assessment of how they affect patient outcomes is a pressing concern given that inappropriate use of expensive technologies is one of the key factors that threaten the affordability of cancer care in the United States To explore these issues further the National Cancer Policy Forum NCPF of the Institute of Medicine organized a workshop in July 2015 This is the third NCPF workshop in a series examining the affordability of cancer care Participants explored clinical benefits and comparative effectiveness of emerging advanced technologies for cancer treatment in radiation therapy and surgery and potential strategies to assess the value and promote optimal use of new technologies in cancer treatment This report summarizes the presentations and discussions from the workshop

Röntgen Centennial A. Haase, Gottfried Landwehr, Eberhard Umbach, 1997 To honour W. C. Röntgen and review the entire area of X-ray development in the various fields of natural, technical, and life sciences, his successors at the Physikalisches Institut of the Universität Würzburg organized a conference named Röntgen Centennial. It took place at the new Physikalisches Institut, not far from the historical site, shortly before the actual 100th anniversary of the discovery. Over forty renowned scientists were invited as representative speakers in the various subfields of X-ray activities. They reviewed the development, gave examples, and described the present status. Most of them provided survey articles, which are gathered in this book. Since most X-ray related activities are somehow represented, an almost complete overview of the entire field is provided. This book thus represents the enormous breadth of X-ray activities and allows one to recognize the potential and quality of today's X-ray research. **Personalized Radiation Therapy: Guided with Imaging Technologies** Yingli Yang, Davide
