Radiation Protection Euclid Seeram, 1997 his book on radiation protection provides clear coverage of essential concepts plus the latest technology and new recommendations of the International Commission on Radiological Protection A clear presentation of introductory concepts and essential physics explains the nature and scope of radiation protection and a discussion of the bioeffects of radiation provides rationale for today s protection concerns Coverage includes principles and objectives of radiation protection a system of dose limitations dose limits radiation dosimetry protection surveys expressions

of patient dose factors influencing radiation dose in imaging dose reduction techniques and quality assurance Safety issues are emphasized as well as recommendations for the prudent use of magnetic resonance imaging Radiation Protection for Medical and Allied Health Personnel National Council on Radiation Protection and Measurements,1989 **Permissible Dose** J. Samuel Walker,2000-11 How much radiation is too much This text examines the evolution over 100 years of radiation protection standards and efforts to ensure radiation safety for nuclear workers and the general public **Radiation Protection in Hospitals**, Richard Francis Mould,1985 A comprehensive practical guide to radiation protection for medical and health care personnel covering the relevant applications to radiation therapy nuclear medicine and diagnostic radiology Useful to a wide range of readers working with radioisotopes and ionizing radiation but having different backgrounds training and needs Radiation Protection for Medical and Allied Health Personnel National Council on Radiation Protection and Measurements,1976 In hospital radiation facilities of all types safety procedures for protecting radiation workers and the general public must be carefully planned and supervised and controlled by a qualified staff member To meet currently accepted standards for protection the potential exposures of workers and anyone else in or near a radiation area are evaluated and precautions taken to avert the possibility of exceeding or even approaching the permissible radiation levels Radiation workers employed in these facilities are informed about these safety procedures However there are various individuals involved in the delivery of medical care or in research who are not usually categorized as radiation workers Their duties may occasionally take them into areas where radiation or radioactive materials are present For want of a better term we may group many of these individuals under the title of allied health personnel Among these are physicians nurses technicians and others who are not classified as radiation workers but who occasionally have to deal with radioactive materials or with patients who have received radiopharmaceuticals In addition there are others not directly involved in the care of patients or research who may incidentally be exposed to radiation in the course of their work Such for instance are personnel in institutional shipping and receiving rooms and those engaged in hospital maintenance work Many of these people are concerned about radiation hazards and often suffer misconceptions regarding the subject They sometimes work without instruction or guidance Sometimes they seek out someone to ask questions about radiation and do receive from them careful answers to their questions Too often however they are simply told that everything is all right and that they have no cause to worry One purpose of this report is to note the types of problems encountered and try to give approaches to handling them The Radiation Protection Supervisor is usually aware of potential hazards within an institution but sometimes the problems are not evident even to him From Preface pages iii iv **Radiation Protection** Gyoujin Cho,2013-10-02 Radiation Protection A Systematic Approach to Safety is a collection of papers that deals with the control management and prevention of toxic agents One paper presents design measures evaluated in a balanced program as a practicable method to lessen occupational radiation exposure Another paper cites the radiation protection aspects practiced in the

decommissioning of the Fuel Reprocessing Plant at Trombay which was designed to chemically process irradiated nuclear fuel One paper describes a methodology to evaluate a collective dose of exposure through different routes following the release of radioactive material into the atmosphere These routes include 1 inhalation of the material from the initial cloud or that arising from the ground 2 external irradiation from radioactive decay of the material in the cloud or in the air 3 and as ingestion of radionuclides transferred through the food chain One paper compares the chemical and radiation hazards to man using an analytical model based on radiation biological concepts at the molecular level to show the effects of other agents The analytical model is also capable of predicting that a synergistic interaction between two different mutagenic agents can occur at the molecular level The collection will prove useful for nuclear physicists and scientists occupational health professionals and researchers in the field of nuclear medicine and engineering
