**Environment VII** J.P. McLaughlin, E.S. Simopoulos, F. Steinhäusler, 2005-03-30 The Natural Radiation Environment Symposium NRE VII the Seventh in the NRE series which commenced forty years ago in 1963 at Rice University Texas was held in Rhodes Greece in May 2002 During the intervening four decades the research work presented at these NRE Symposia has contributed to a deeper understanding of natural radiation and in particular of its contribution to human radiation exposures It is clear from the quality and diversity of the 143 papers in this volume of Radioactivity in the Environment series that the study of the natural radiation environment is an active and continually expanding field of research The papers in this volume fall into a number of main and topical research areas namely the measurement and behaviour of natural radionuclides in the environment cosmic radiation measurement and dosimetry the external penetrating radiation field at ground level TENR Technologically Enhanced Natural Radiation and NORM Naturally Occurring Radioactive Materials studies assessment of the health effects of radon regulatory aspects of natural radiation exposures In these papers the results of many new surveys of natural radionuclide levels in the environment and of improved methods of detection are described While some of the natural radiation sources investigated are unmodified by human activity many accounts are given here of exposures to natural sources which have been enhanced by technology Such TENR and NORM exposures are shown to range from activities such as mining oil and gas exploitation the use of industrial by products as building materials to space travel to name but a few In several cases quite high doses to some individuals are shown to occur Accounts are given here of methods to prevent and reduce exposures to such sources      Management of Terrorist Events Involving Radioactive Material National Council on Radiation Protection and Measurements, 2001      *Cancer Risk Evaluation* Günter Obe, Gary E. Marchant, Burkhard Jandrig, Holger Schütz, Peter M. Wiedemann, 2011-04-27 An overview of the different approaches to cancer risk assessment of environmental factors including omics technologies discussing the strengths and weaknesses of the methods in different fields The main focus is on the carcinogenic effects of ionizing and non ionizing radiation demonstrating the difficulties in accurately assessing those factors that may or may not pose a significant cancer risk The book extends the view to a broader context of risk assessment highlighting various aspects of risk management Written by leading experts in the field this is a resource for policy makers and professionals in health risk assessment and public health workers as well as oncologists and researchers in academia This title is also available as a mobile App from MedHand Mobile Libraries Buy it now from Google Play or the MedHand Store      **Development of a Biokinetic Model for Radionuclide-contaminated Wounds and Procedures for Their Assessment, Dosimetry, and Treatment** National Council on Radiation Protection and Measurements, 2007      Radiation in Space: Relevance and Risk for Human Missions Christine E. describes the molecular mechanisms of heavy charged particles deleterious effects in the body Lastly it discusses countermeasures and addresses the vital question Are we ready for launch Written for researchers in the space life sciences and space biomedicine and for master s students in biology physics and medicine the book will also benefit all non experts endeavouring to understand and enter space      *Nuclear Energy* Nicholas Tsoulfanidis,2012-12-12 Nuclear Energy provides an authoritative reference on all aspects of the nuclear industry from fundamental reactor physics calculations to reactor design nuclear fuel resources nuclear fuel cycle radiation detection and protection and nuclear power economics Featuring 19 peer reviewed entries by recognized authorities in the field this book provides comprehensive streamlined coverage of fundamentals current areas of research and goals for the future The chapters will appeal to undergraduate and graduate students researchers and energy industry experts      **Multiple Stressors: A Challenge for the Future** Carmel Mothersill,Irma Mosse,Colin Seymour,2007-08-20 Ecotoxicological risk from multiple stressors covers any situation where organisms are exposed to a combination of environmental stressors These include physical and chemical pollutants as well as other stressors such as parasites and environmental impact e g climate change or habitat loss The combination of stressors can result in increased risk to organisms either additive or synergistic effects or decreased effects protective or antagonistic effects The multiple stressor challenge is an international multi disciplinary problem requiring an international multi disciplinary approach The current approach to multiple stressors is to examine one stressor at a time and assume additivity Little work has been done on combinations of stressors such that potential interactions can be determined The problem is very complex Multiple stressors pose a whole spectrum of challenges that range from basic science to regulation policy and governance The challenges raise fundamental questions about our understanding of the basic biological response to stressors as well as the implications of those uncertainties in environmental risk assessment and management In addition to the great breadth there is also great depth in the research challenges largely due to the complexity of the issues From a basic science point of view many of the mechanisms and processes under investigation are at the cutting edge of science involving new paradigms such as genomic instability and bystander effects      *NCRP Report* National Council on Radiation Protection and Measurements,1966      **Safe on Mars** National Research Council,Division on Engineering and Physical Sciences,Space Studies Board,Aeronautics and Space Engineering Board,Committee on Precursor Measurements Necessary to Support Human Operations on the Surface of Mars,2002-06-29 This study commissioned by the National Aeronautics and Space Administration NASA examines the role of robotic exploration missions in assessing the risks to the first human missions to Mars Only those hazards arising from exposure to environmental chemical and biological agents on the planet are assessed To ensure that it was including all previously identified hazards in its study the Committee on Precursor Measurements Necessary to Support Human Operations on the Surface of Mars referred to the most recent report from NASA s Mars Exploration Program Payload Analysis Group MEPAG Greeley 2001 The committee concluded that the requirements

identified in the present NRC report are indeed the only ones essential for NASA to pursue in order to mitigate potential hazards to the first human missions to Mars
