Radiative Forcing of Climate Change National Research Council, Division on Earth and Life Studies, Board on Atmospheric Sciences and Climate, Climate Research Committee, Committee on Radiative Forcing Effects on Climate, 2005-03-25 Changes in climate are driven by natural and human induced perturbations of the Earth's energy balance. These climate drivers or forcings include variations in greenhouse gases, aerosols, land use, and the amount of energy Earth receives from the Sun. Although climate throughout Earth's history has varied from snowball conditions with global ice cover to hothouse conditions when glaciers all but disappeared, the climate over the past 10,000 years has been remarkably stable and favorable to human civilization. Increasing evidence points to a large human impact on global climate over the past century. The report reviews current knowledge of climate forcings and recommends critical research needed to improve understanding. Whereas emphasis to date has been on how these climate forcings affect global mean temperature, the report finds that regional variation and climate impacts other than temperature deserve increased attention. *Radiative Forcing of Climate Change*

**Fool Me Twice** Shawn Lawrence Otto,2011-10-11 Whenever the people are well informed Thomas Jefferson wrote they can be trusted with their own government But what happens in a world dominated by complex science Are the people still well enough informed to be trusted with their own government And with less than 2 percent of Congress with any professional background in science how can our government be trusted to lead us in the right direction Will the media save us Don t count on it In early 2008 of the 2 975 questions asked the candidates for president just six mentioned the words global warming or climate change the greatest policy challenge facing America To put that in perspective three questions mentioned UFOs Today the world s major unsolved challenges all revolve around science By the 2012 election cycle at a time when science is influencing every aspect of modern life antiscience views from climate change denial to creationism to vaccine refusal have become mainstream Faced with the daunting challenges of an environment under siege an exploding population a falling economy and an education system slipping behind our elected leaders are hard at work passing resolutions that say climate change is not real and astrology can control the weather Shawn Lawrence Otto has written a behind the scenes look at how the government our politics and the media prevent us from finding the real solutions we need Fool Me Twice is the clever outraged and frightening account of America s relationship with science a relationship that is on the rocks at the very time we need it most **America's Climate Security Act of 2007, S. 2191** United States. Congress. Senate. reach net zero carbon emissions by 2060 and produce a substantial amount of clean hydrogen annually by 2030 The Kingdom is optimally situated geographically between the major demand markets in Europe and North Asia from where it can leverage clean hydrogen exports as a potential tool to become a player of strategic importance and successfully diversify its economy under its Vision 2030 program More broadly the book charts a course for fossil fuel exporting countries such as Saudi Arabia to carve a competitive position for themselves over the forthcoming decades using clean hydrogen as a catalyst for the energy transition With contributions from global energy experts the chapters in this book provide a multifaceted analysis of the who what where and why related to clean hydrogen development within and beyond Saudi Arabia Collectively the contributions analyze the countries and regions relevant to Saudi Arabia in terms of dedicated hydrogen policies projects and approaches that aim to incentivize production and demand in an increasingly carbon constrained world The book is a timely unique and an indispensable resource for practitioners and students of energy geopolitics and climate policy working on hydrogen in academia applied research national government bodies and international organizations The Open Access version of this book available at [www.taylorfrancis.com](http://www.taylorfrancis.com) has been made available under a Creative Commons Attribution Non Commercial No Derivatives CC BY NC ND 4 0 license

### **Reconfiguring Global Climate Governance in North America**

Marcela Lopez-Vallejo, 2016-04-08 Global climate governance has presented problems that have led to failures yet it has also opened the door to new transregional governance schemes especially in North America This book introduces an environmental dimension into the concept of governance Almost fifteen years after the climate global governance concept emerged results worldwide have not been as favorable as expected This book details previous discussions about the concept of global climate governance and its limits It highlights how the Kyoto Protocol has a limited design taking into account a national approach to global regional and transnational problems had no obligatory mechanisms for implementation and explains the emergence of new polluters not committed under it such as China and India Furthermore this book explores other levels of authority such as regional institutions the North American agreement on trade NAFTA and on environment NAAEC as well as the regional energy working group NAEWG The author puts forward a theoretical proposal for re territorialization and coordination of policies for climate change into new forms of articulating interests in what she terms transnational green economic regions TGERs and tests this on two case studies the Regional Greenhouse Gas Initiative RGGI and the Western Climate Initiative WCI This study presents the challenges and opportunities of a transregional approach in North America
