Effects of Gas-phase Radiation and Detailed Kinetics on the Burning and Extinction of a Solid Fuel Jennifer L. Rhatigan,2001 This is the first attempt to analyze both radiation and detailed kinetics on the burning and extinction of a solid fuel in a stagnation point diffusion flame We present a detailed and comparatively accurate computational model of a solid fuel flame along with a quantitative study of the kinetics mechanism radiation interactions and the extinction limits of the flame A detailed kinetics model for the burning of solid trioxane a trimer of formaldehyde is coupled with a narrowband radiation model with carbon dioxide carbon monoxide and water vapor as the gas phase participating media The solution of the solid trioxane diffusion flame over the flammable regime is presented in some detail as this is the first solution of a heterogeneous trioxane flame We identify high temperature and low temperature reaction paths for the heterogeneous trioxane flame We then compare the adiabatic solution to solutions that include surface radiation only and gas phase and surface radiation using surface model **Supercomputing** Vladimir Voevodin,Alexander Antonov,Dmitry
