Optimal perioperative care for thoracoabdominal and descending thoracic aortic aneurysm repair: a review Abraham Katz, Orlando R. Suero, Vicente Orozco-Sevilla, Ourania Preventza, Marc R. Moon, Joseph S. Coselli, Subhasis Chatterjee, 2023-01-06

In this review the authors discuss the perioperative management of patients who undergo thoracoabdominal aortic aneurysm or descending thoracic aortic aneurysm repair All major organ systems are potentially vulnerable to complications from these repairs meticulous preoperative attention to optimizing relevant comorbidities diligent performance of intraoperative anesthetic and surgical techniques and careful postoperative management are necessary to maximize the likelihood of successful outcomes Specific attention should be given to reducing the risk for spinal cord ischemia and for paraplegia Of note renal and respiratory systems are especially vulnerable to major complications and require a thoughtful

multidisciplinary approach Because preventing complications is the primary goal of perioperative management deviations from the normal course must be recognized promptly and addressed aggressively to reduce the likelihood of major morbidity and death
