Rainfall Simulation Runoff And Soil Erosion Catena Supplement 4:

Soil Erosion Danilo Godone, Silvia Stanchi, 2011-11-21 Soil erosion affects a large part of the Earth surface and accelerated soil erosion is recognized as one of the main soil threats compromising soil productive and protective functions The land management in areas affected by soil erosion is a relevant issue for landscape and ecosystems preservation In this book we collected a series of papers on erosion not focusing on agronomic implications but on a variety of other relevant aspects of the erosion phenomena The book is divided into three sections i various implications of land management in arid and semiarid ecosystems ii erosion modeling and experimental studies iii other applications e g geoscience engineering The book covers a wide range of erosion related themes from a variety of points of view assessment modeling mitigation best practices etc **Catena Supplement** ,1988 *Monitoring and Modelling Dynamic Environments* Alan P. Dykes, Mark Mulligan, John Wainwright, 2015-09-28 The Times Obituaries 4 August 2008 reported that John Thornes was one of the most eminent and influential physical geographers of his generation John s keen interest in understanding landform processes and evolution was furthered through a variety of methods and informed across a range of disciplinary boundaries In particular he pushed for better integration of monitoring theoretical and simulation modelling field and laboratory experimentation and remote sensing techniques Although dominated by an interest in the Mediterranean region and problems of land degradation his research activities ranged across a number of time scales and with other environmental perspectives This collection of papers reflects this wide range of John s interests through the recent work of scientists and professionals most strongly influenced by his rigorous training or leadership The thematic focus of the book which runs through all of the main contributions is the integration of different methodologies and the application of this approach to improved understanding of natural systems and the development of appropriate strategies for environmental and resource management Short overviews of John s contributions to geomorphological research are also presented to provide context for the origins of this book

Zingales,2013-10-22 This volume contains most of the scientific contributions to the workshop Prediction of Agricultural Nonpoint Source Pollution Model Selection and Application held in Venice in the historic Ca Vendramin Calergi in June 1984 Other contributions of specialists who were not able to attend the workshop have also been included in an attempt to make the work more complete It is hoped that this collection will be useful to planners who operate in the field of agricultural diffuse source pollution since several contributions are state of the art presentations and others are specialized studies by American and European researcher Geomorphology of Desert Environments Anthony J. Parsons,A. D.

Abrahams,2009-03-20 About one third of the Earth s land surface experiences a desert climate and this area supports approximately 15% of the planet s population This percentage continues to grow and with this growth comes the need to acquire and apply an understanding of desert geomorphology Such an understanding is vital in managing scarce and fragile resources and in mitigating natural hazards This authoritative reference book is comprehensive in its coverage of the geomorphology of desert environments and is arranged thematically It begins with an overview of global deserts proceeds through treatments of weathering hillslopes rivers piedmonts lake basins and aeolian surfaces and concludes with a discussion of the role of climatic change Written by a team of international authors all of whom are active in the field the chapters cover the spectrum of desert geomorphology **Australian Journal of Soil Research** ,2009 **Geomorphology of Upland Peat** Martin Evans,Jeff Warburton,2011-03-29 The Geomorphology of Upland Peat offers a detailed synthesis of existing literature on peat erosion incorporating new research ideas and data from two leading experts in the field Presents the most detailed and current work to date Written in a style that is both intelligent and accessible Fully illustrated with original drawings and photographs Relevant and information for a broad audience working on organic sediments in various environments Soil Survey and Land Evaluation ,1983 *Environmental Issues in the Mediterranean* John B.

the crisis This book collects summarizes and analyzes the latest information on agricultural land and forest degradation Beyond that it introduces groundbreaking hypotheses theories and solutions enriching the scientific community s understanding The objective is clear to be an informative resource that not only sheds light on the problem but also catalyzes actionable solutions

Arid and Semi-arid Environments Aaron Yair, Simon M. Berkowicz, 1989 Farmers' Indicators for Soil Erosion Mapping and Crop Yield Estimation in Central Highlands of Kenya Barrack O. Okoba, 2005 Crop yield losses were closely correlated to soil erosion indicators as well as to soil erosion status FRDA Report, 1994 *Impacts of Biomass Harvesting on Soil Disturbance and Surface Soil Erosion at Seller Creek in Interior British Columbia* P. R. Commandeur, Mark E. Walmsley, Pacific Forestry Centre, 1993 Numerous studies have documented the soil disturbance effects of ground based harvesting systems Biomass harvesting in the form of the additional recovery of woody materials normally left on site has the potential for increasing the levels of soil disturbance The objective of this study was to document the impact of biomass harvesting by rubber tired skidders on soils namely soil disturbance and surface soil erosion An increase in soil disturbance in the form of skid trails skidroads and deep and very deep gouges was observed on the biomass harvested plots compared to the conventionally harvested plots Erosion bridges indicated more soil movement on the biomass than the conventional plots Soil erosion volumes trapped behind sediment dams located at the base of the plots were greater on the biomass plots average of 0.38 m³ over 1.77 years than on the conventional plots average of 0.22 m³ However the unharvested plots also recorded accumulation of material where in fact no mineral soil erosion occurred average of 0.15 m³ This was the result of vegetation growth and decay and the accumulation of organic matter Adjusted average erosion values of 0.78 m³ ha year for the biomass plots and 0.37 m³ ha year for the conventional plots are comparable to data obtained from studies conducted on clearcut and burned sites in the Oregon Cascades These erosion figures are considered moderate and numerous site factors help explain this observed response Rainfall simulation experiments conducted at the site indicated that infiltration rates on skidroads and fireguards are generally greater than 1.5 cm hour Rainfall intensities 15 minute duration that exceed 1.5 cm hour are expected to occur with a return period of about 1 year at the study site Spring snow melt rates may exceed infiltration capacities especially along compacted low infiltration areas such as skidroads Some overland flow and surface soil erosion is expected to occur elsewhere under similar conditions as those found at the study site Recommendations are given regarding the measurement techniques used in this study

Physical Geography, 1990

Water Encyclopedia, Oceanography; Meteorology; Physics and Chemistry; Water Law; and Water History, Art, and Culture Jay H. Lehr, 2005-06 Volume 1 outlines water supply infrastructure The requirements for supplying water to a home a city or a factory can be very different Experts in these fields explain the nuances of the details involved in maintaining adequate quantity and quality for these different consumers Waste water management can be of even greater concern yet its management can follow similar paths when compared to sophisticated water supply treatment Both the

physics and chemistry of these fields are fully covered Volume 2 deals with the big picture of regional water supplies how they become contaminated how they can be protected and how they can best serve the surrounding populations and industries Significant focus is placed upon the natural chemistry of available water supplies and its biological impacts Case studies from regions around the world offer an excellent picture of the world's water resources
