Beven,2012-01-30 Rainfall Runoff Modelling The Primer Second Edition is the follow up of this popular and authoritative text first published in 2001 The book provides both a primer for the novice and detailed descriptions of techniques for more advanced practitioners covering rainfall runoff models and their practical applications This new edition extends these aims to include additional chapters dealing with prediction in ungauged basins predicting residence time distributions predicting the impacts of change and the next generation of hydrological models Giving a comprehensive summary of available techniques based on established practices and recent research the book offers a thorough and accessible overview of the area Rainfall Runoff Modelling The Primer Second Edition focuses on predicting hydrographs using models based on data and on representations of hydrological process Dealing with the history of the development of rainfall runoff models uncertainty in model predictions good and bad practice and ending with a look at how to predict future catchment hydrological responses this book provides an essential underpinning of rainfall runoff modelling topics Fully revised and updated version of this highly popular text Suitable for both novices in the area and for more advanced users and developers Written by a leading expert in the field Guide to internet sources for rainfall runoff modelling software

Hydrological Modelling in Arid and Semi-Arid Areas Howard Wheeler,Soroosh Sorooshian,K. D. Sharma,2007-11-22 Arid and semi arid regions are defined as areas where water is at its most scarce The hydrological regime in these areas is extreme and highly variable and they face great pressures to deliver and manage freshwater resources However there is no guidance on the decision support tools that are needed to underpin flood and water resource management in arid areas UNESCO initiated the Global network for Water and Development Information for arid lands GWADI and arranged a workshop of the world s leading experts to discuss these issues This book presents chapters from contributors to the

workshop and includes case studies from the world's major arid regions to demonstrate model applications and web links to tutorials and state of the art modelling software This volume is a valuable reference for researchers and engineers working on the water resources of arid and semi arid regions

Modelling Hydrological Response at the Catchment Scale

Guoping Zhang,2007 Hydrology in Practice Elizabeth M. Shaw,Keith J. Beven,Nick A. Chappell,Rob Lamb,2017-12-21

Hydrology in Practice is an excellent and very successful introductory text for engineering hydrology students who go on to be practitioners in consultancies the Environment Agency and elsewhere This fourth edition of Hydrology in Practice while retaining all that is excellent about its predecessor by Elizabeth M Shaw replaces the material on the Flood Studies Report with an equivalent section on the methods of the Flood Estimation Handbook and its revisions Other completely revised sections on instrumentation and modelling reflect the many changes that have occurred over recent years The updated text has taken advantage of the extensive practical experience of the staff of JBA Consulting who use the methods described on a day to day basis Topical case studies further enhance the text and the way in which students at undergraduate and MSc level can relate to it The fourth edition will also have a wider appeal outside the UK by including new material on hydrological processes which also relate to courses in geography and environmental science departments In this respect the book draws on the expertise of Keith J Beven and Nick A Chappell who have extensive experience of field hydrological studies in a variety of different environments and have taught undergraduate hydrology courses for many years Second and final year undergraduate and MSc students of hydrology in engineering environmental science and geography departments across the globe as well as professionals in environmental protection agencies and consultancies will find this book invaluable It is likely to be the course text for every undergraduate MSc hydrology course in the UK and in many cases overseas too

Understanding Hydrological Variability for Improved Water Management in the Semi-Arid Karkheh Basin, Iran Ilyas Masih,2011-09-28 This study provides a hydrology based assessment of surface water resources and its continuum of variability and change at different spatio temporal scales in the semi arid Karkheh Basin Iran where water is scarce competition among users is high and massive water resources development is under way The study reveals that the ongoing allocation planning is not sustainable and essentially requires reformulation with consideration of spatio temporal variability and observed trends in the streamflows regarding flood intensification and decline in low flows The development of innovative methods for quantification of the hydrological fluxes i e regionalization of model parameters based on similarity of the flow duration curve and the use of areal precipitation input in the hydrological modeling helped better understanding and modeling the basin hydrology The investigation of scenarios for upgrading rain fed areas to irrigated agriculture using SWAT recommends the promotion of in situ soil and water conservation techniques Conversion of rain fed areas to irrigation causes significant reduction in the downstream flows and requires additional considerations such as less development in the upper catchments practicing supplementary irrigation and developing water storage The knowledge generated is instructive for hydrological assessment and its use in water resources planning and management in the river basin context
