Rainforests Ecosystems:

High-Latitude Rainforests and Associated Ecosystems of the West Coast of the Americas Richard G.

Lawford, Paul Alaback, Eduardo Fuentes, 2012-12-06 Regional intercomparisons between ecosystems on different continents can be a powerful tool to better understand the ways in which ecosystems respond to global change Large areas are often needed to characterize the causal mechanisms governing interactions between ecozones and their environments Factors such as weather and climate patterns land ocean and land atmosphere interactions all play important roles As a result of the strong physical north south symmetry between the western coasts of North and South America the similarities in climate coastal oceanography and physiography between these two regions have been extensively documented High Latitude Rain Forests and Associated Ecosystems of the West Coast of the Americas presents current research on West Coast forest and river ecology and compares ecosystems of the Pacific Northwest with those of South America Soils of Tropical Forest

Ecosystems Andreas Schulte, Daddy Ruhayat, 2013-03-14 An understanding of the characteristics and the ecology of soils particularly those of forest ecosystems in the humid tropics is central to the development of sustainable forest management systems The present book examines the contribution that forest soil science and forest ecology can make to sustainable land use in the humid tropics Four main issues are addressed characteristics and classification of forest soils chemical and hydrological changes after forest utilization soil fertility management in forest plantations and agroforestry systems as well as ecosystem studies from the dipterocarp forest region of Southeast Asia Additionally case studies include work from Guyana Costa Rica the Philippines Malaysia Australia and Nigeria *Tropical Rain Forest Ecosystems* H. Lieth, M.J.A. Werger, 2012-12-02 After publication of the first volume of the Tropical Rain Forest the International Journal of Mycology and Lichenology commented This is a welcome addition to the literature on the ecology of tropical rain forests The book provides a wealth of data and stimulating discussions and is of great interest to ecologists interested in tropical areas Whereas the first volume dealt with system ecological aspects such as community organization and processes the present volume concentrates on biogeographical aspects such as species composition diversity and geographical variation Recent ecological research in the tropical rain forest has greatly extended our understanding of biogeographical patterns of variation in the various groups of organisms and has revealed many of the ecological and evolutionary forces that led to the present patterns of variation Many important systems of co evolution between the tropical rain forest ecosystems have also come to light and the loss of species and related damage is better understood in quantitative terms This volume presents a comprehensive review of these and other features of the rain forest ecosystem structure and the ecological processes operating that system General chapters on abiotic and biotic factors are followed by specific chapters on all major groups of organisms Prospects for the future are discussed and research needs clearly stated Also the human exploitation of the system its effects and its limits are discussed The book is extensively illustrated by photographs graphs and tables and comprehensive bibliographies

follow each chapter Author systematic and subject indices complete the book It is a must for all ecologists agriculturists foresters agronomists hydrologists soil scientists entomologists human ecologists nature conservationists and planners dealing with tropical areas Biologists and environmentalists will also find the volume of great interest

Restoration of Tropical Forest Ecosystems Helmut Lieth, M. Lohmann, 1914 The destruction of the tropical forests continues rapidly We all know that this has global ecological and economic consequences The problem is of such magnitude that it can only be compared to warfare The destruction of tropical forests is both detrimental to the global ecology as well as posing a serious threat to the people living in these areas Furthermore the overutilization of such a valuable resource poses a serious threat to the next generations Besides the problem generated for the people in these regions and for the earth in general there is a moral obligation to preserve the vast biological diversity in the tropical forests We have a commitment to all species on earth as well as man and therefore need to preserve as many as possible if not all This book discusses the problem from different angles from forestry ecology and nature conservation The two main problem areas are first the wise utilization of that portion of the forest which will be used especially the introduction of planned forestry in such areas and second the development of a good plan for nature conservation in the tropics
