Bushman, 2024-01-26 Almost sixty years after Vatican II the question of its interpretation is as lively as ever While numerous theologies of renewal are advanced conspicuously absent is any serious erudition of the text taken by Paul VI John Paul II and Benedict XVI as the hermeneutical key to understanding the Council s goal and method namely Paul VI s encyclical *Ecclesiam Suam* This study corrects this inattention and proposes that Pope Paul s logic of renewal is so profoundly a dimension of divine revelation and of the Church s life that it is not just one theology of renewal among many but the theology of renewal It is thus the key to understanding the Council s authentic pastoral character The logic of renewal sets personal spiritual metanoia as the center path of renewal preceded by the path of doctrinal penetration which assures that renewal is faithful to God and complemented by the path of reinvigorated mission which is the fruit of conversion As the first post Christendom ecumenical council Vatican II addressed the question What does it mean to be the Church of Christ at this point in history Its answer Become what you are Convert into a more perfect realization of your own mystery vocation and mission *Renewal of Authorities for U.S. Participation in the International Energy Program* Allan I. Extinction Learning from a Mechanistic and Systems Perspective Denise Manahan-Vaughan, Onur

Gunturkun, Oliver T. Wolf, 2016-08-08 Throughout their lifetime animals learn to associate stimuli with their consequences Following memory acquisition and consolidation circumstances may arise that necessitate that initially learned behaviour is no longer relevant The ensuing process is called extinction learning and involves a novel and complex learning procedure that involves a large number of neural entities While the neural fundamentals of the initial acquisition are well studied our understanding of the behavioural and neural basis of extinction is still limited and derives mostly from rodent data acquired through fear conditioning paradigms Fear conditioning and extinction in rodents is a spectacularly successful paradigm within behavioral neuroscience However in recent years new approaches have been emerging that examine the mechanisms of extinction learning in different setting that also involve appetitive models a broader comparative perspective a focus on other brain systems an examination of hormonal factors and conditioning of immune responses Only a broader analysis of the neural fundamentals of extinction learning will finally uncover shared and distinct mechanisms that underlie extinction learning in different functional systems The papers compiled in this Research Topic offer new and valuable insights into the mechanisms and functional implementation of extinction learning at its different levels of complexity and form the basis for new concepts and research ideas in this field
