**Representation Theory of Artin Algebras** Maurice Auslander, Idun Reiten, Sverre O. Smalø, 1997-08-21 This book is an introduction to the contemporary representation theory of Artin algebras by three very distinguished practitioners in the field. Beyond assuming some first year graduate algebra and basic homological algebra the presentation is entirely self contained so the book is suitable for any mathematicians especially graduate students wanting an introduction to this active field. Written in a clear comprehensive style with full proofs. It can very well serve as an excellent reference as well as a textbook for graduate students. EMS Newsletter

**An Introduction to the Representation Theory of Artin Algebras** Idun Reiten, 1983 Representation Theory of Algebras Raymundo Bautista, Roberto Martínez-Villa, José Antonio de la Peña, 1996 Addressed to graduate students and research mathematicians interested in associative rings and algebras. The 42 papers consider such topics as Frobenius functions on translation quivers, examples of distinguished tilting sequences on homogeneous varieties, separable deformations of blocks with abelian normal defect group and of derived equivalent global blocks, strong exact Borel sub algebras and global dimensions of quasi hereditary algebras and the Auslander-Reiten quiver of restricted enveloping algebras. Also includes tributes to mathematician Maurice Auslander. 1926 94 No index. Member prices are 77 for individuals and 103 for institutions. Annotation copyright by Book News Inc. Portland OR

*Representation Theory I* V. Dlab, P. Gabriel, 2006-11-15 Elements of the Representation Theory of Associative Algebras: Techniques of representation theory Ibrahim Assem, Daniel Simson, Andrzej Skowroński, 2006 Publisher Description: unedited publisher data. Counter This first part of a two volume set offers a modern account of the representation theory of finite dimensional associative algebras over an algebraically closed field. The authors present this topic from the perspective of linear representations of finite oriented graphs, quivers and homological algebra. The self contained treatment constitutes an elementary up to date introduction to the subject using on the one hand quiver theoretical techniques and on the other tilting theory and integral quadratic forms. Key features include many illustrative examples plus a large number of end of chapter exercises. The detailed proofs make this work suitable both for courses and seminars and for self study. The volume

will be of great interest to graduate students beginning research in the representation theory of algebras and to mathematicians from other fields
