consistent methods for measuring spatial correlation The concept of spatial correlation took pride of place mirroring concerns in time series analysis about similar kinds of dependence known to distort the standard probability theory used to derive appropriate statistics Early applications of spatial correlation tended to reflect geographical patterns expressed as points The perspective taken on such analytical thinking was founded on induction the search for pattern in data with a view to suggesting appropriate hypotheses which could subsequently be tested In parallel but using very different techniques came the development of a more deductive style of analysis based on modelling and thence simulation Here the focus was on translating prior theory into forms for generating testable predictions whose outcomes could be compared with observations about some system or phenomenon of interest In the intervening years spatial analysis has broadened to embrace both inductive and deductive approaches often combining both in different mixes for the variety of problems to which it is now applied Urban and Regional Data Management Alenka Krek,Massimo Rumor,Sisi Zlatanova,Elfriede M.

insights into household decision making on consumption and saving borrowing and investing portfolio allocation demand of professional advice and retirement choices Nearly 70% of U S gross domestic product is devoted to consumption making an understanding of the consumer a first order issue in macroeconomics After all understanding how households played an important role in the boom and bust cycle that led to the financial crisis and recent great recession is a key metric Introduces household finance by examining consumption and borrowing choices Tackles macro problems by observing new original micro data Looks into the future of consumer spending by using data not questionnaires **Fact Sheet** ,1994 **The Paradox of Representation** David Lublin,2020-11-10 In The Paradox of Representation David Lublin offers an unprecedented analysis of a vast range of rigorous empirical evidence that exposes the central paradox of racial representation Racial redistricting remains vital to the election of African Americans and Latinos but makes Congress less likely to adopt policies favored by blacks Lublin s evidence together with policy recommendations for improving minority representation will make observers of the political scene reconsider the avenues to fair representation Using data on all representatives elected to Congress between 1972 and 1994 Lublin examines the link between the racial composition of a congressional district and its representative s race as well as ideology The author confirms the view that specially drawn districts must exist to ensure the election of African Americans and Latinos He also shows however that a relatively small number of minorities in a district can lead to the election of a representative attentive to their interests When African Americans and Latinos make up 40 percent of a district according to Lublin s findings they have a strong liberalizing influence on representatives of both parties when they make up 55 percent the district is almost certain to elect a minority representative Lublin notes that particularly in the South the practice of concentrating minority populations into a small number of districts decreases the liberal influence in the remaining areas Thus a handful of minority representatives almost invariably Democrats win elections but so do a greater number of conservative Republicans The author proposes that establishing a balance between majority minority districts and districts where the minority population would be slightly more dispersed making up 40 percent of a total district would allow more African Americans to exercise more influence over their representatives **Memorandum Prepared by the Government of Bombay for Submission to the Indian Statutory Commission** Bombay (India : State),1929 *Proceedings of the National Geographic Areas Conference* ,1984
