Representations On Krein Spaces Hot And Derivations Of C Algebras:

Representations on Krein Spaces [Hot] and Derivations of C*-Algebras Edward Kissin, Victor S Shulman, 1997-10-03 This text provides a comprehensive treatment of representations on indefinite metric spaces and their applications to the theory of derivations of C algebras The book consists of two parts The first studies the geometry of indefinite metric spaces Krein and Pi kappa spaces and describes the theory of J symmetric operator algebras and representations of algebras and groups on these spaces in a systematic form For representations on Pi kappa spaces many significant new results are obtained this establishes a possible approach to the general theory of representations In the second part different techniques of the theory of J symmetric representations on Krein spaces are applied to the theory of derivations of C algebras implemented by skew symmetric and dissipative operators Various results are obtained which establish a link between the deficiency indices of skew symmetric operators implementing derivations of C algebras and dimensions of representations of these algebras The problem of isomorphism of skew symmetric operators is also touched upon Numerous properties of the domains of derivations are investigated These domains constitute an important subclass of differentiable Banach algebras that is dense subalgebras of C algebras with properties in many respects similar to the properties of algebras of differentiable functions The Weyl operator commutation relations are examined in the general context of derivations of C algebras Powers and Arveson s indices of one parameter semigroups of endomorphisms of the algebra B are considered and various notions of the index of a derivation are introduced and studied Application of the theory of J symmetric representations on Krein spaces to the theory of derivations of C algebras is a new research area of growing interest and there are many exciting advances to be made in this field The book covers a fairly large and complex body of material and will serve as a stimulus to further research activity in this area **Books in Print Supplement** ,2002
