Reproduction Of Marine Invertebrates Vol V Molluscs Pelecypods And Lesser Classes:

Reproduction of Marine Invertebrates V5 Arthur Giese, 2012-12-02 *Reproduction of Marine Invertebrates Volume V Molluscs Pelecypods and Lesser Classes* presents valuable insights on the early evolution of molluscan reproductive biology. It discusses the asexual reproduction, sexual reproduction, capacity and developmental stages of pelecypods and the remaining smaller classes including aplousobranchia, polyplousobranchia and monoplousobranchia. One chapter in this volume provides a broad overview of the knowledge and problems on oyster reproductive biology. This book is ideal for marine biologists and researchers, reproductive biologists and developmental biologists. *Reproduction and Development of Marine Invertebrates of the Northern Pacific Coast* Megumi F. Strathmann, 2017-09-05 This reference work is designed to provide background information on an array of northeastern Pacific marine invertebrate species so that they can be more easily included in comparative studies of morphology, cell biology, reproduction, embryology, larval biology and ecology. It is meant to serve biologists who are new to the field as well as experienced investigators who may not be familiar with the invertebrate fauna of the northern Pacific Coast. The species discussed in this volume are mostly from the cold temperate waters of the San Juan Archipelago near Puget Sound and the Strait of Georgia, but the information and methods given will be useful in laboratories from Alaska to central California and applicable to some extent in other coastal or inland facilities. An introductory chapter discusses basic procedures for collecting and maintaining mature specimens for initiating spawning and for culturing embryos and larvae in the laboratory. Subsequent chapters summarize reproduction and development in thirty different invertebrate groups and provide recent references through which additional information can be traced, cite monographs or keys needed to identify species and give methods useful for studying an array of selected species. Available information on habitat, diet, reproductive mode, egg size, developmental pattern, developmental times, larval type and conditions for settlement and metamorphosis is reported for over 450 species. **Invertebrate Embryology and Reproduction** Fatma El-Bawab, 2020-01-18 *Invertebrate Embryology and Reproduction* deals with the practical and theoretical objectives of the descriptive embryology of invertebrates along with discussions on reproduction in these groups of animals. It explains several morphological and anatomical expressions in the field and covers the embryology of invertebrate animals starting from the Protozoa to the Echinodermata, the Protochordata and Tunicates. These groups include economically important aquatic invertebrates such as crustaceans as well as medically important invertebrates and economic arthropods. Each chapter is preceded by the taxonomy of the discussed phylum and/or the species to enable the reader to locate the systematic position. Covers phylum definition, general characteristics, classification, reproduction, asexual reproduction, gametic reproduction, spawning, fertilization, development and embryogenesis. Includes recent findings in the area along with detailed figures and photos that illustrate important concepts. Brings together difficult to obtain research data from the field, not only in Egyptian libraries but globally and previously only found through specialized references not widely available. Clarifies descriptions with

striking photos and electron microscopical studies of different species

Evolution of Sexual Reproduction in Marine Invertebrates Andrew (Andrey N.) Ostrovsky, 2013-12-16 Three major aspects that distinguish this book are that 1 it contains the most detailed analysis of the sexual reproduction oogenesis fertilization and embryonic incubation in a particular phylum of the aquatic invertebrates Bryozoa ever made this analysis is based on an exhaustive review of the literature on that topic published over the last 260 years as well as extensive original histological anatomical and morphological data obtained during studies of both extant and extinct species 2 this broad analysis has made it possible to reconstruct the major patterns stages and trends in the evolution of sexual reproduction in various bryozoan clades showing numerous examples of parallelisms during transitions from broadcasting to embryonic incubation from planktotrophic to non feeding larvae and from lecithotrophy to placentation corresponding shifts in oogenesis fertilization and embryonic development are discussed in detail and 3 the key evolutionary novelties acquired by Bryozoa are compared with similar innovations that have evolved in other groups of marine invertebrates showing the general trends in the evolution of their sexual reproduction Ecological background of these innovations is considered too Altogether these aspects make the monograph an Encyclopedia of bryozoan sexual reproduction offering an integral picture of the evolution of this complex phenomenon

Structure and Evolution of Invertebrate Nervous Systems Andreas Schmidt-Rhaesa, Steffen Harzsch, Günter Purschke, 2015-12-17 The nervous system is particularly fascinating for many biologists because it controls animal characteristics such as movement behavior and coordinated thinking Invertebrate neurobiology has traditionally been studied in specific model organisms whilst knowledge of the broad diversity of nervous system architecture and its evolution among metazoan animals has received less attention This is the first major reference work in the field for 50 years bringing together many leading evolutionary neurobiologists to review the most recent research on the structure of invertebrate nervous systems and provide a comprehensive and authoritative overview for a new generation of researchers Presented in full colour throughout Structure and Evolution of Invertebrate Nervous Systems synthesizes and illustrates the numerous new findings that have been made possible with light and electron microscopy These include the recent introduction of new molecular and optical techniques such as immunohistochemical staining of neuron specific antigens and fluorescence in situ hybridization combined with visualization by confocal laser scanning microscopy New approaches to analysing the structure of the nervous system are also included such as micro computational tomography cryo soft X ray tomography and various 3 D visualization techniques The book follows a systematic and phylogenetic structure covering a broad range of taxa interspersed with chapters focusing on selected topics in nervous system functioning which are presented as research highlights and perspectives This comprehensive reference work will be an essential companion for graduate students and researchers alike in the fields of metazoan neurobiology morphology zoology phylogeny and evolution

comprise the second largest phylum of animals after arthropods occurring in virtually all habitats Some are commercially important a few are pests and some carry diseases while many non marine molluscs are threatened by human impacts which have resulted in more extinctions than all tetrapod vertebrates combined This book and its companion volume provide the first comprehensive account of the Mollusca in decades Illustrated with hundreds of colour figures it reviews molluscan biology genomics anatomy physiology fossil history phylogeny and classification This volume includes general chapters drawn from extensive and diverse literature on the anatomy and physiology of their structure movement reproduction feeding digestion excretion respiration nervous system and sense organs Other chapters review the natural history including ecology of molluscs their interactions with humans and assess research on the group Key features of both volumes up to date treatment with an extensive bibliography thoroughly examines the current understanding of molluscan anatomy physiology and development reviews fossil history and phylogenetics overviews ecology and economic values and summarises research activity and suggests future directions for investigation Winston F Ponder was a Principal Research Scientist at The Australian Museum in Sydney where he is currently a Research Fellow He has published extensively over the last 55 years on the systematics evolution biology and conservation of marine and freshwater molluscs as well as supervised post graduate students and run university courses David R Lindberg is former Chair of the Department of Integrative Biology Director of the Museum of Paleontology and Chair of the Berkeley Natural History Museums all at the University of California He has conducted research on the evolutionary history of marine organisms and their habitats on the rocky shores of the Pacific Rim for more than 40 years The numerous elegant and interpretive illustrations were produced by Juliet Ponder

Reproductive Biology of Invertebrates, Accessory Sex Glands, 1993-03-02 Reproductive Biology of Invertebrates Volume III Accessory Sex Glands Edited by K G Adiyodi Accessory Sex Glands is the third volume in the encyclopaedic series and provides very valuable information some hitherto unpublished on the distribution structure origin physiology biochemistry pharmacology and evolution of the accessory sex glands in different groups of invertebrates Volumes I and II of this series published by Wiley have given detailed accounts of the structure origin composition and physiology of female and male gametes and also provided some information on the mechanisms controlling their production The secretions of accessory sex glands are indispensable for several key aspects of gamete physiology and for successful fertilization and development in many internally fertilizing invertebrates Interestingly enough accessory sex gland secretions are produced in some species at least under the influence of gonadotrophic hormones as are the gametes themselves The data on invertebrate accessory sex glands are scattered in various journals and have not been so far collected critically evaluated and published in book form This volume thus fills a void and serves as an indispensable corollary and companion to the two volumes that have already appeared on gametology in the series Contents Series Preface Preface to Volume III Systematic Resume of the Invertebrates Platyhelminthes Turbellaria S S Guraya and V R Parshad Nemertina M Gontcharoff
