Reproductive Immunology:

Crafting Immunity Jennifer Keelan, 2017-03-02 Immunity is as old as illness itself yet historians have only just begun to take up the challenge of reconstructing the modern transformation of attempts to protect against disease *Crafting Immunity* assembles in one volume the most recent efforts of an international group of scholars to place the diverse practices of immunity in their historical contexts It is this diversity that provides the book with its greatest source of strength Collectively the papers in this volume suggest that it was the craft like small scale and local conditions of clinical medicine that turned the immunity of individuals and populations into biomedical objects That is to say the modern conception of immunity was at least as much the product of the work of healing as it was the systematic result of discoveries about the immune system Working outside the narrow confines of laboratory histories *Crafting Immunity* is the first attempt to set the problems of immunity into a variety of social technological institutional and intellectual contexts It will appeal not only to historians and sociologists of health but also to social and cultural historians interested in the biomedical creation of modern health regimens

Integrating Evolutionary Biology into Medical Education Jay Schulkin, Michael Power, 2019-12-19 Clinicians and scientists are increasingly recognising the importance of an evolutionary perspective in studying the aetiology prevention and treatment of human disease the growing

prominence of genetics in medicine is further adding to the interest in evolutionary medicine. In spite of this too few medical students or residents study evolution. This book builds a compelling case for integrating evolutionary biology into undergraduate and postgraduate medical education as well as its intrinsic value to medicine. Chapter by chapter the authors, experts in anthropology, biology, ecology, physiology, public health, and various disciplines of medicine, present the rationale for clinically relevant evolutionary thinking. They achieve this within the broader context of medicine but through the focused lens of maternal and child health, with an emphasis on female reproduction and the early life biochemical, immunological, and microbial responses influenced by evolution. The tightly woven and accessible narrative illustrates how a medical education that considers evolved traits can deepen our understanding of the complexities of the human body, variability in health, susceptibility to disease, and ultimately help guide treatment, prevention, and public health policy. However, integrating evolutionary biology into medical education continues to face several roadblocks. The medical curriculum is already replete with complex subjects and a long period of training. The addition of an evolutionary perspective to this curriculum would certainly seem daunting, and many medical educators express concern over potential controversy if evolution is introduced into the curriculum of their schools. Medical education urgently needs strategies and teaching aids to lower the barriers to incorporating evolution into medical training. In summary, this call to arms makes a strong case for incorporating evolutionary thinking early in medical training to help guide the types of critical questions physicians ask or should be asking. It will be of relevance and use to evolutionary biologists, physicians, medical students, and biomedical research scientists.
