The Elusive Embryo Gay Becker, 2000-12-20

In the first book to examine the industry of reproductive technology from the perspective of the consumer Gay Becker scrutinizes the staggering array of medical options available to women and men with fertility problems and assesses the toll both financial and emotional that the quest for a biological child often exacts from would be parents Becker interviewed hundreds of people over a period of years their stories are presented here in their own words Absorbing informative and in many cases moving these stories address deep seated notions about gender self worth and the cultural ideal of biological parenthood Becker moves beyond people s personal experiences to examine contemporary meanings of technology and the role of consumption in modern life What emerges is a clear view of technology as culture with technology the template on which issues such as gender nature and the body are being rewritten and continuously altered The Elusive

Embryo chronicles the history and development of reproductive technology and shows how global forces in consumer culture have contributed to the industry's growth. Becker examines how increasing use of reproductive technology has changed ideas about natural pregnancy and birth. Discussing topics such as in vitro fertilization, how men and women naturalize the use of a donor, and what happens when new reproductive technologies don't work, Becker shows how the experience of infertility has become increasingly politicized as potential parents confront the powerful forces that shape this industry. *The Elusive Embryo* is accessible, well written, and well documented. It will be an invaluable resource for people using or considering new reproductive technologies as well as for social scientists and health professionals.

Reproductive Health and Assisted Reproductive Technologies In Sub-Saharan Africa Olanike S. Adedokun, Erebi Ndoni, 2023-08-28 This book focuses on reproductive health rights and assisted reproductive technologies (ART) in sub-Saharan Africa. Each chapter is connected to the other by focusing on different aspects of ART as a means of achieving conception. Topics such as regulation of ART practices, surrogacy, and specific aspects of ART which are gradually becoming acceptable but largely unregulated in Africa, promises to be of interest to scholars, researchers, and fertility practitioners. Research in the book takes a rights-based approach and ethical analysis of ART practice in sub-Saharan Africa by authors from diverse backgrounds, bringing together law and society perspectives. Readers stand to gain new knowledge on the societal, legal, medical, and psychological requirements, effects, and challenges of reproductive health rights and ART in the African context. The book is also relevant to UN Sustainable Development Goal 3: Good Health and Well-being, given that it promotes and advocates for access to reproductive healthcare for persons who have difficulty or are unable to conceive without medical assistance.

The Pursuit of Parenthood Margaret Marsh, Wanda Ronner, 2019-08-06 A wide-ranging history of assisted reproductive technologies and their ethical implications. Finalist of the PROSE Award for Best Book in History of Science, Medicine, and Technology by the Association of American Publishers. Since the 1978 birth of the first IVF baby, Louise Brown, in England, more than eight million children have been born with the help of assisted reproductive technologies. From the start, they have stirred controversy and raised profound questions: Should there be limits to the lengths to which people can go to make their idea of family a reality? Who should pay for treatment? How can we ensure the ethical use of these technologies? And what can be done to address the racial and economic disparities in access to care that enable some to have children while others go without? In *The Pursuit of Parenthood*, historian Margaret Marsh and gynecologist Wanda Ronner seek to answer these challenging questions. Bringing their unique expertise in gender history and women's health to the subject, Marsh and Ronner examine the unprecedented means—liberating for some and deeply unsettling for others—by which families can now be created. Beginning with the early efforts to create embryos outside a woman's body and ending with such new developments as mitochondrial replacement techniques and uterus transplants, the authors assess the impact of contemporary reproductive technology in the United States. In this volume, we meet the scientists and physicians who have developed these technologies.

and the women and men who have used them Along the way the book dispels a number of fertility myths offers policy recommendations that are intended to bring clarity and judgment to this complicated medical history and reveals why the United States is still known as the Wild West of reproductive medicine Living Laboratories Robyn Rowland,1992
