Reproductive Technologies A Reader:

Reproductive Technologies Thomas A. Shannon, 2003-12-17 Over a decade ago the field of bioethics was established in response to the increased control over the design of living organisms afforded by both medical genetics and biotechnology. Since its introduction, bioethics has become established as an academic discipline with journals and professional societies, is covered regularly in the media, and affects people everyday around the globe. In response to the increasing need for information about medical genetics and biotechnology as well as the ethical issues these fields raise, Sheed Ward proudly presents the Readings in Bioethics Series. Edited by Thomas A. Shannon, the series provides anthologies of critical essays and reflections by leading ethicists in four pivotal areas: reproductive technologies, genetic technologies, death and dying, and health care policy. The goal of this series is twofold: first, to provide a set of readers on thematic topics for introductory or survey courses in bioethics or for courses with a particular theme or time limitation; second, each of the readers in this series is designed to help students focus more thoroughly and effectively on specific topics that flesh out the ethical issues at the core of bioethics. The series is also highly accessible to general readers interested in bioethics. This volume collects critical essays by leading scholars on reproductive technologies, abortion, in vitro fertilization, prenatal diagnosis, and cloning. Included in this volume are David Adamson, James P. Toner, Thomas A. Shannon, Bonnie Steinbock, Laura A. Schieve, Richard J. Paulson, G. Pennings, Thomas H. Murray, Lori B. Andrews, J. M. Phillips. Governance of Science Steve Fuller, 1999-12-16 What does social and political theory have to say about the role of science in society Do scientists and other professional enquirers have an unlimited right to be wrong What are the implications of capitalism and multiculturalism for the future of the university This ground breaking text offers a fresh perspective on the governance of science from the standpoint of social and political theory Science has often been seen as the only institution that embodies the elusive democratic ideal of the open society Yet science remains an elite activity that commands much more public trust than understanding even though science has become increasingly entangled with larger political and economic issues Fuller proceeds by rejecting liberal and communitarian ideologies of science in favour of a republican approach centred on the right to be wrong He shows how the recent scaling up of scientific activity has undermined the republican ideal The centrepiece of the book a social history of the struggle to render the university a republic of science focuses on the potential challenges posed by multiculturalism and capitalism Finally drawing on the science policy of the US New Deal Fuller proposes nothing short of a new social contract for secularizing science
