Learning quantitative research is taken much for granted. This is probably why there are fewer generic books on quantitative than qualitative research. This book is long overdue. Clearly written and well structured, it takes us through the whole journey of a research project from developing research questions to presenting the findings, passing through philosophical underpinnings, recruitment of participants and ethical considerations. Written by an array of well known researchers and teachers, this book will certainly appeal to new as well as seasoned researchers. Those who will use it will not be disappointed.

Kader Parahoo, University of Ulster. The title of this text is somewhat misleading. It is not only an excellent and thorough guide to qualitative health research methods, it is also an excellent introduction to all forms of qualitative research. It takes the reader gently through theoretical and ethical concerns to the practicalities and benefits of utilising qualitative approaches. As such, it is that rare thing: a text that can be used by novice researchers to learn their craft and a key reference resource for experienced research practitioners.

Dr John Cullen, School of Business, National University of Ireland, Maynooth, UK. This is a first rate collection of essays that promotes an informed understanding of both underpinning principles and widely used techniques. A great deal of effort has clearly been invested in co-ordinating the contributions and this has delivered clarity, complementarity and effective coverage. This is a welcome, carefully crafted and very accessible resource that will appeal to students and researchers in healthcare and beyond.

Martin Beirne, Professor of Management and Organizational Behaviour, University of Glasgow. **Adam Smith Business School**, UK.

Making Sense of Research Gill Hek, Pam Moule, 2006-08-07. The Third Edition of this introduction to research for students and professionals in health and social care now contains material on literature searching techniques.
