

Super Simple Research Paper

****The research and writing process takes time. Expect to skim 5-10 resources (websites, databases, books, etc.) before selecting one you will use. Once you select a resource, plan to read all or most of it to select portions that will support your research. A research project involves doing, um, research.**

- **Step 1 – Select a topic.** Make sure you are interested. You don't want to spend days (weeks?) working on a topic you find boring. Make sure you can find enough information to support your topic. If not, pick a new topic.
- **Step 2 – Think about what your topic is, who you are writing for (do they know anything about your topic?), your writing style, and purpose.** Is the purpose of your paper to persuade (argue a viewpoint or convince others your viewpoint is correct), summarize, evaluate (give criteria and determine if something meets it), analyze, or investigate (research a topic to find little-known facts without bias)?
- **Step 3 – Write a research question.** Once you have selected your topic and determined your purpose, do some preliminary research. This is when you can use Wikipedia to find out enough about your topic that you can ask a question. Your research question helps to focus your topic. It should not be too broad. Your question can ask "How?" "What?" or "Why?"
- **Step 4 – Write a thesis statement.** A thesis statement usually appears at the end of your first paragraph and tells the reader what your paper will be about. You can adjust your thesis statement as you write your paper if your focus changes.
- **Step 5 – Find your first source.** Before you start looking, decide what kind of information you need – facts, opinions, news reports, research studies, history. Decide what kind of sources would most likely have what you are looking for – books, websites, databases, newspaper articles, primary sources. Remember that websites do not contain all of the knowledge in the world. There is a lot of information hidden in online databases, books and other sources. A Google search will not return this information.

How do I know if I am using a Website or a Database?

The school library purchases databases. They can be accessed through the library web page with a password. A database is an organized collection of information. The information is usually scholarly and authoritative. The search results can be filtered to get the exact information you are looking for.

How to Write Better Medical Papers Michael Hanna, 2019-03-20 This book guides medical researchers through all stages of transforming their scientific data and ideas into a published paper Many researchers in medicine including the life sciences and health sciences struggle to get their research written and published Manuscripts are typically rejected and or sent back for revisions several times before ever being published One reason for this is that researchers have not received much instruction in the specific subjects and skills needed to write and publish scientific medical papers research methodology ethics statistics data visualization writing revising and the practicalities of publishing Instead of wasting the reader s time discussing trivialities of punctuation spelling etc this book tackles all the major scientific issues that routinely lead to manuscripts getting rejected from the journals The section Preparing covers the range of methodological ethical and practical aspects that researchers need to address before starting to write their paper The section Analyzing reviews commonplace problems in the statistical analysis and presentation and how to resolve those problems The section Drafting describes what to write in all the various parts of a paper the Introduction Methods Results Discussion Abstract etc The section Revising explains and illustrates how to improve the

writing style of any manuscript The section Publishing discusses how to navigate the peer review process and all other practical aspects of the publishing phase This book draws on the author s decade of experience as an independent medical writer and research consultant but it is not written merely as the personal opinion of yet another expert The entire book is grounded in the existing scientific and scholarly literature with extensive references and a lengthy annotated bibliography so readers can quickly obtain more information on any aspect they want Thus this book provides a more evidence based scholarly account of how medical scientific papers should be written in order to improve medical communication and accelerate scientific progress After reading this entire book cover to cover medical researchers will know how to write better quality medical papers and they will be able to publish their work in better journals with less time and struggle This book is essential reading for anyone conducting research in clinical medicine life sciences or health sciences **NBS Special**
