Research and Practice in Alzheimer's Disease - Volume 5, 2001

Dementia and Human Rights Suzanne Cahill, 2018-03-28 The time has come to further challenge biomedical and clinical thinking about dementia which has for so long underpinned policy and practice. Framing dementia as a disability, this book takes a rights-based approach to expand the debate. Applying a social constructionist lens, it builds on earlier critical perspectives by bringing together concepts including disability, social inclusion, personhood, equality, participation, dignity, empowerment, autonomy, and solidarity. Launching the debate into new and exciting territory, the book argues that people living with dementia come within the UN Convention on the Rights of Persons with Disabilities and therefore have full entitlement to all the rights the Convention enshrines. A human rights-based approach has not to date been fully applied to interrogate the lived experience and policy response to dementia. With the fresh analytical tools provided in this book, policy makers and practitioners will gain new insights into how this broader perspective can be used to further promote the quality of life and quality of care for all those affected by dementia.

Ageing and Dementia Kurt Jellinger, Reinhold Schmidt, Manfred Windisch, 2002-08-20 Epidemiological studies, modern clinical neuroimaging, neuropsychological, molecular biological, and genetic studies have considerably enhanced our knowledge about ageing processes of the human brain, its sequelae, diagnostic and therapeutic possibilities, and limits. In addition to Alzheimer's disease and other degenerative dementias, the impact of cerebrovascular lesions and their risk factors in the pathogenesis of cognitive disorders of the aged

are increasingly acknowledged and the recognition of mild cognitive impairment as a frequent initial stage of developing dementia is becoming an increasingly important diagnostic and therapeutic problem. The included papers were presented at the 7th International Symposium in Graz Sept 2001 and give a timely overview of the current and future concepts of pathogenesis, diagnosis and treatment strategies of pathological brain ageing and dementias, early recognition of mild cognitive impairment and future possibilities of prevention of dementing processes.

Infectious Lesions of the Central Nervous System Vsevolod Zinserling, 2022-06-06. This book discusses all aspects of infectious CNS pathology including different bacterial, viral, fungal, mycoplasma and protozoan pathogens accompanied by illustrations that show macro and histopathological changes. It also presents microbiological, epidemiological and clinical data with a particular focus on meningitis and encephalitis of different bacterial and viral aetiologies, influenza, COVID-19 and other viral and bacterial generalized infections. Further, the book explores the importance of mixed infections including those in the late stages of HIV infection as well as pathological changes in different age groups including newborns. A special chapter is devoted to the probable role of biological pathogens in noninfectious brain pathology.

Preclinical and clinical issues in Alzheimer's disease drug research and development Cesare Mancuso, Silvana Gaetani, 2015-03-03. Alzheimer's disease (AD) is a chronic neurodegenerative disorder characterized by progressive cognitive dysfunction and memory loss, inability to perform the activities of daily living and mood disorders. According to the so-called amyloid cascade hypothesis, amyloid peptide (A β) produced by beta and gamma secretase-mediated cleavages of the amyloid precursor protein (APP) plays a pivotal role in the pathogenesis of AD. A β was also shown to contribute to AD pathology by stimulating the hyperphosphorylation of tau, which is responsible for the formation of neurofibrillary tangles. However, the amyloid cascade hypothesis was challenged by other theories which lend support to the idea that A β is not causative but can be considered as an innocent bystander in AD. Although preclinical research generated impressive lines of evidence about the several intracellular mechanisms whose impairment leads to the onset and progression of AD, clinical research aimed at the

development of new drugs capable of preventing or delaying the onset of neuronal damage in AD patients has produced limited results. The drugs currently available for the treatment of AD are acetylcholinesterase inhibitors (AChEI) and the NMDA glutamate receptor antagonist memantine. The AChEI increase acetylcholine levels in the synaptic cleft which are reduced because of the progressive damage of cholinergic neurons in cognitive brain areas e.g. amygdala, hippocampus and frontal cortex whereas memantine is used to prevent/reduce calcium dependent excitotoxic neuronal cell death. Both classes of drugs have been shown to improve symptoms related to cognitive decline but their effects are confined largely to patients with mild to moderate AD in particular during the first year or so of treatment. An alternative to this symptomatic treatments involves the use of drugs that intervene in the pathogenesis of the disease. Recently monoclonal antibodies against A β were proposed as novel agents capable to remove A β from the brain thus preventing neuronal damage. The research topic focuses on the preclinical and clinical evidence about the several factors that contribute to the pathogenesis of AD as well as the potential therapeutic role of new classes of drugs still under preclinical or clinical development.

Sexual Ethics and Problematic Consent David Boonin,2024-11-11 When it comes to sex no means no but yes doesn't always mean yes Cases where a person's yes to sex should be treated as a no are uncontroversial when they involve forms of coercion deception or incompetence that clearly render their consent to sex invalid But between those cases where yes clearly means yes and those where yes clearly means no lie a variety of more problematic cases In this provocative and challenging book David Boonin considers what we should say about them Clear cases of coercion for example involve the threat of significant physical harm But what should we say about cases involving the threat of harms that are relatively insignificant or that involve no physical harm at all Impersonating someone's spouse to trick them into saying yes to sex is clearly very wrong but what about the more mundane kinds of lies people tell when they're trying to meet someone It's wrong to have sex with someone who says yes when they're so drunk they're about to pass out and not wrong if they say yes after having a few sips of beer What though should we say about the more difficult cases in the middle where it's genuinely unclear whether they've had too much to drink What's the most reasonable view about other forms of incompetent consent to sex like those involving young children elderly dementia patients or people born with severe and permanent cognitive impairments And what about cases of problematic sexual consent that don't involve coercion deception or incompetence at all Can a patient give valid consent to sex with their therapist Can the offer of a large amount of money in exchange for sex invalidate the sexual consent the offer elicits Boonin offers a variety of clear and at times surprising answers to these and other questions about unclear cases in an engaging discussion that should be of interest to students and scholars as well as to anyone else who is concerned with problematic sexual consent
