Research Priorities For Conservation Biology Critical Issues Series:

Research Priorities for Conservation Biology Society for Conservation Biology, 1989 Research Priorities for Conservation Biology proposes an urgent research agenda to improve our understanding and preservation of biological diversity The book discusses ecosystems conservation ecology of communities population ecology and viability reproduction propagation and release fragmentation ethnobiology and genetic resources training in the developing world **Papua New Guinea Conservation Needs Assessment** ,1993 Endangered Species Recovery Tim Clark, Richard Reading, Alice Clarke, 1994-10 Endangered Species Recovery presents case studies of prominent species recovery programs in an attempt to explore and analyze their successes failures and problems and to begin to find ways of improving the process It is the first effort to engage social scientists as well as biologists in a wide ranging analysis and discussion of endangered species conservation and provides valuable insight into the policy and implementation framework of species recovery programs The book features a unique integration of case studies with theory and provides sound practical ideas for improving endangered species policy implementation **Environmental Restoration** John Berger, 2012-06-22 Environmental Restoration is the product of a ground breaking conference on ecological restoration held in January 1988 at the University of California Berkeley It offers an overview from the nation s leading experts of the most current techniques of restoration including examples of the complex and subtle biological interactions we must understand to ensure success Chapters cover restoration of agricultural lands barrens coastal ecosystems prairies and range lands Additional sections address temperate forests and watersheds mined lands soil bioengineering urban issues including waste treatment and solid toxic and radioactive waste management The book also covers restoration of aquatic systems includes chapters on strategic planning and land acquisition and provides examples of successful projects **General Program, Annual AIBS Meeting of Biological Societies** American Institute of Biological Sciences, 1988 **Environment Abstracts Annual** ,1990 This database encompasses all aspects of the impact of people and technology on the environment and the effectiveness of remedial policies and technologies featuring more than 950 journals published in the U S and abroad The database also covers conference papers and proceedings special reports from international agencies non governmental organizations universities associations and private corporations Other materials selectively indexed include significant monographs government studies and newsletters Ecologically Sustainable Development Working Groups: Forest use ,1991 Papua New Guinea Conservation Needs Assessment Janis B. Alcorn, 1993 **California and the World Ocean '97** ,1998 **Ecology and Sustainability of Southern Temperate Ecosystems** Tony Norton, 1994 Can conservation and development goals be reconciled as suggested by the popular notion of sustainable development Ecology and Sustainability of Southern Temperate Ecosystems explores this proposition and related questions of science and management focusing on Australia s southern temperate forest ecosystems The impacts of wood harvesting roading exotic species and other disturbance factors on forest

species communities habitats and ecosystems are surveyed in various chapters Despite countless debates inquiries and management changes the long term maintenance of ecological values in native forests used for wood production remains uncertain The contributions in this volume demonstrate that finer resolutions of management of production forests are demanded This in turn will require balancing increased levels of long term research and monitoring with better abilities to make decisions in the face of uncertainty However the capacity of existing policy processes and management regimes to fulfil these demands can be questioned and the role of ecology and ecologists in informing decision making given greater consideration

Landscape Research has been established as an interdisciplinary field dealing with complex environmental processes at multiple spatial and temporal scales During the course of its history various societal technological and philosophical stimuli have shaped Landscape Research e g the declaration of Landscape Ecology in the 1930s and contemporary global technological and societal developments Modern landscape research presently uses mathematics statistics and advanced simulation techniques to combine empirical observations with known theories from ecology physics geography social science and so on Knowledge is thus updated and quantified via models that are used for estimation hypothesis testing prediction and assessment of scenarios Advances in the computational sciences e g fast computers and vast array of software space science e g remote sensing and biological sciences e g genetics as well as new perspectives in the social sciences play important roles Research findings are implemented in conservation management urban planning and global change mitigation strategies This book identifies emerging fields and new challenges that are discussed within the framework of the driving forces of Landscape Development Rather than offering a comprehensive overview of all fields of Landscape Research the book addresses hot topics emphasizing major contemporary trends in these fields **The Routledge Handbook of Landscape Ecology** Robert A. Francis,James D.A. Millington,George L.W. Perry,Emily S. Minor,2021-09-08 The Handbook provides a supporting guide to key aspects and applications of landscape ecology to underpin its research and teaching A wide range of contributions written by expert researchers in the field summarize the latest knowledge on landscape ecology theory and concepts landscape processes methods and tools and emerging frontiers Landscape ecology is an interdisciplinary and holistic discipline and this is reflected in the chapters contained in this Handbook Authors from varying disciplinary backgrounds tackle key concepts such as landscape structure and function scale and connectivity landscape processes such as disturbance flows and fragmentation methods such as remote sensing and mapping fieldwork pattern analysis modelling

and participation and engagement in landscape planning and emerging frontiers such as ecosystem services landscape approaches to biodiversity conservation and climate change Each chapter provides a blend of the latest scientific understanding of its focal topics along with considerations and examples of their application from around the world An invaluable guide to the concepts methods and applications of landscape ecology this book will be an important reference text for a wide range of students and academics in ecology geography biology and interdisciplinary environmental studies
