Modern Uses of Multiple-Valued Logic M. Dunn, G. Epstein, 2012-12-06 This is a collection of invited papers from the 1975 International Symposium on Multiple valued Logic Also included is an extensive bibliography of works in the field of multiple valued logic prior to 1975 this supplements and extends an earlier bibliography of works prior to 1965 by Nicholas Rescher in his book Many Valued Logic McGraw Hill 1969 There are a number of possible reasons for interest in the present volume First the range of various uses covered in this collection of papers may be taken as indicative of a breadth which occurs in the field of multiple valued logic as a whole the papers here can do no more than cover a small sample question answering systems analysis of computer hazards algebraic structures relating to multiple valued logic algebra of computer programs fuzzy sets Second a large part of the interest in such uses and applications has occurred in the last twenty even ten years It would be too much to expect this to be reflected in Rescher's 1969 book Third in the 1970's a series of annual symposia have been held on multiple valued logic which have brought much of this into a sharp focus The 1971 and 1972 symposia were held at the SUNY at Buffalo the 1973 symposium at the University of Toronto and the 1974 symposium at West Virginia University Papers from these symposia are included in the bibliography which may be found in an appendix of this book

Multiple Antiquities - Multiple Modernities Gábor Klaniczay, Michael Werner, Otto Gécser, 2011-09-12 Im 19. Jahrhundert war die Antike eine wichtige BezugsgroÙe in vielen europäischen Ländern Dabei gab es Unterschiede in der Sicht und Aneignung der griechischen römischen und auch archaischen Antike Im Sinne einer Histoire croisée zeigt der Band wie jede Nation ihre eigene Antike schuf

Fractional Programming I.M. Stancu-Minasian, 2012-12-06 Mathematical programming has known a spectacular diversification in the last few decades This process has happened both at the level of mathematical research and at the level of the applications generated by the solution methods that were created To write a monograph dedicated to a certain domain of mathematical programming is under such circumstances especially difficult In the present monograph we opt for the domain of fractional programming Interest of this subject was generated by the fact that various optimization problems from engineering and economics consider the minimization of a ratio between physical and/or economical functions for example cost/time cost/volume cost/profit or other quantities that measure the efficiency of a system For example the productivity of industrial systems defined as the ratio between the realized services in a system within a given period of time and the utilized resources is used as one of the best indicators of the quality of their operation Such problems where the objective function appears as a ratio of functions constitute fractional programming problems Due to its importance in modeling various decision processes in management science operational research and economics and also due to its frequent appearance in other problems that are not necessarily economical such as information theory numerical analysis stochastic programming decomposition algorithms for large linear systems etc the fractional programming method has received particular attention in the last three decades
