unitary social process and agedness as a distinct social location have lost much of their purchase on the social imagination. Instead this work asserts that later life has become as much a field for not becoming old as of old age. The volume locates the origins of this transformation in the cultural ferment of the 1960s when new forms of embodiment concerned with identity and the care of the self arose as mass phenomena. Over time these new forms of embodiment have been extended, changing the traditional relationship between body, age and society by making struggles over the care of the self central to the cultures of later life.
