Poetic Logic and the Origins of the Mathematical Imagination Marcel Danesi, 2023-09-02 This book treats eighteenth century Italian philosopher Giambattista Vico's theory of poetic logic for the first time as the originating force in mathematics transforming instinctive counting and spatial perception into poetic metaphorical symbolism that dovetails with the origin of language It looks at current work on mathematical cognition from Lakoff and N ez to Butterworth Dehaene and beyond matching it against the poetic logic paradigm In a sense it continues from where Kasner and Newman left off connecting contemporary research on the mathematical mind to the idea that the products of early mathematics were virtually identical to the first forms of poetic language As such this book informs the current research on mathematical cognition from a different angle by looking back at a still relatively unknown philosopher within mathematics The aim of this volume is to look broadly at what constitutes the mathematical mind through the Vichian lens of poetic logic Vico was among the first to suggest that the essential nature of mind could be unraveled indirectly by reconstructing the sources of its modifications his term for creations that is by examining the creation and function of symbols words and all the other uniquely human artifacts including mathematics the mind has allowed humans to establish the world of civil society Vico's term for culture and civilization The book is of interest to cognitive scientists working on math cognition It presents the theory of poetic logic as Vico articulated it in his book *The New Science* examining its main premises and then applying it to an interpretation of the ongoing work in math cognition It will also be of interest to the general public since it presents a history of early mathematics through the lens of an idea that has borne fruit in understanding the origin of language and symbols more broadly

Imagine Math 3 Michele Emmer, 2015-03-04 Imagine mathematics imagine with the help of mathematics imagine new worlds new geometries new forms This volume in the series *Imagine Math* casts light on what is new and interesting in the relationships between mathematics imagination and culture The book opens by examining

the connections between modern and contemporary art and mathematics including Linda D Henderson's contribution. Several further papers are devoted to mathematical models and their influence on modern and contemporary art including the work of Henry Moore and Hiroshi Sugimoto. Among the many other interesting contributions are an homage to Benoît Mandelbrot with reference to the exhibition held in New York in 2013 and the thoughts of Jean Pierre Bourguignon on the art and math exhibition at the Fondation Cartier in Paris. An interesting part is dedicated to the connections between math, computer science and theatre with the papers by C Bardainne and A Mondot. The topics are treated in a way that is rigorous but captivating, detailed but very evocative. This is an all embracing look at the world of mathematics and culture. Teaching Mathematics Through Story Caroline McGrath, 2014-06-27. This book explores the exciting ways in which story can be used as a flexible resource to facilitate children's mathematical thinking. It looks at the potential relationship between story and mathematics and practically demonstrates how they can be combined to help children connect, understand and express mathematical ideas using story language. This book draws on practical work with children, educators, parents, professional storytellers and trainee practitioners who bring theoretical ideas to life and offer insight into their mathematical story experiences. It is a must have for all those who want to make mathematics relevant, accessible and imaginative for young children. *Third International Handbook of Mathematics Education* M.A. (Ken) Clements, Alan Bishop, Christine Keitel-Kreidt, Jeremy Kilpatrick, Frederick Koon-Shing Leung, 2012-11-15. These themes are taken up by 84 internationally recognized scholars based in 26 different nations. Each of the sections is structured on the basis of past, present and future aspects. The first chapter in a section provides historical perspectives: How did we get to where we are now? The middle chapters in a section analyze present day key issues and themes: Where are we now and what recent events have been especially significant? and the final chapter in a section reflects on policy matters: Where are we going and what should we do? Readership: Teachers, mathematics educators, policy makers, mathematicians, graduate students, undergraduate students. Large set of authoritative international authors. **Mathematically Speaking** C.C. Gaither, Alma E Cavazos-Gaither, 1998-01-01.
