Mathematical Models for Suspension Bridges Filippo Gazzola, 2015-05-29 This work provides a detailed and up to the minute survey of the various stability problems that can affect suspension bridges In order to deduce some experimental data and rules on the behavior of suspension bridges a number of historical events are first described in the course of which several questions concerning their stability naturally arise The book then surveys conventional mathematical models for suspension bridges and suggests new nonlinear alternatives which can potentially supply answers to some stability questions New explanations are also provided based on the nonlinear structural behavior of bridges All the models and responses presented in the book employ the theory of differential equations and dynamical systems in the broader sense demonstrating that methods from nonlinear analysis can allow us to determine the thresholds of instability

been committed explicitly to continuous improvement for more than a decade I couldn't help but notice as the editors also point out in their conclusion the extent to which continuous improvement is a common thread throughout the book That speaks to the book's practical utility in many settings and on a long term basis No less valuable is the discussion of student motivation by many of the authors which STEM teachers in our area have identified as a major issue of interest to them in recent surveys Richard Bogovich Executive Director Rochester Area Math Science Partnership Minnesota Veenstra Padr and Furst Bowe provide a huge contribution to the field of STEM education We all know the statistics and of the huge need in the area of STEM students and education but what has been missing are application and success stories backed by research and modeling The editors have successfully contributed to our need by focusing on collaborative models building the K 12 pipeline showing what works at the collegiate level connecting across gender issues and illustrating workforce and innovative ideas John J Jasinski President Northwest Missouri State University Advancing the STEM Agenda provides a broad set of current perspectives that will contribute in many ways to advancing the understanding and enhancement of education in science education and engineering This work is packed with insights and perspectives from experienced educators and bridges the transition from education to workplace John Dew Senior Vice Chancellor Troy University
