applied to image generation e.g. CT, MRI, DR and DSR storing and transferring of images and viewing, analysing and interpreting of images. The application of computers to these activities which characterise radiological departments may be defined as Computer Assisted Radiology (CAR). In the main, CAR will promote the transition from analog imaging systems to digital systems, integration of digital imaging modalities through Picture Archiving and Communication Systems (PACS) and the graduated employment of Medical Work Stations (MWS) for diagnosis and therapy planning. It will transfer geographically, organisationally and/or mentally isolate imaging activities towards fully integrated multi-imaging modality diagnostic departments. This development will have a considerable impact on patient management, on the medical profession and on the health care system.

Nonconventional Technical Information Systems in Current Use, 1966 **Israel's Way of War** Ehud Eilat, 2015-12-23. Israel has fought many wars since its founding in 1948, from conventional military conflicts with Arab forces to irregular clashes with guerrilla and terror groups. A study of these confrontations reveals strategic and military patterns. Written by a former member of the Israel Defense Forces, this book compares the wars fought in Lebanon against the Palestine Liberation Organization (1982) and against Hezbollah (2006) and in the Gaza Strip (1956, 1967, 2008, 2009 and 2014). The author draws similarities between Israel and Western nations, mainly the United States and Britain, in their waging of conventional and irregular warfare and offers a comparison of the Vietnam War to Israel's struggle with Hezbollah in the 1990s.
