science and the age of the Internet World Wide Web that followed This book describes the evolution of computer science in this second age in the form of seven overlapping intermingling parallel histories that unfold concurrently in the course of the two decades Certain themes characteristic of this second age thread through this narrative the desire for a genuine science of computing the realization that computing is as much a human experience as it is a technological one the search for a unified theory of intelligence spanning machines and mind the desire to liberate the computational mind from the shackles of sequentiality and most ambitiously a quest to subvert the very core of the computational paradigm itself We see how the computer scientists of the second age address these desires and challenges in what manner they succeed or fail and how along the way the shape of computational paradigm was altered And to complete this history the author asks and seeks to answer the question of how computer science shows evidence of progress over the course of its second age *Problems in Programming* Andrej Vitek,1991-11-12 The book compiles solved problems from the high school computer science competitions in Slovenia The solutions are grouped by their subject into the following chapters easy problems computing recursive functions sorting and arranging graphs process control in real time computer graphics and other problems Each chapter begins with an introduction giving the common details of the solutions that follow in chronological order The introductions and the themselves embody the answers into a wider realm from which the problem originates and reveal some of the background that led to the formulation of the exercise The programs accompanying the solutions indicate the essential characteristics of the proper programming style The detailed analyses accompanying some of the solutions indicate that perfect programming requires not only the knowledge of a programming language a bit of good will and a little of common sense but quite a lot more Transactions of the Second Army Conference on Applied Mathematics and Computing ,1986
