The Big Book of Real Analysis Syafiq Johar, 2024-01-04 This book provides an introduction to real analysis a fundamental topic that is an essential requirement in the study of mathematics It deals with the concepts of infinity and limits which are the cornerstones in the development of calculus Beginning with some basic proof techniques and the notions of sets and functions the book rigorously constructs the real numbers and their related structures from the natural numbers During this construction the readers will encounter the notions of infinity limits real sequences and real

series These concepts are then formalised and focused on as stand alone objects Finally they are expanded to limits sequences and series of more general objects such as real valued functions Once the fundamental tools of the trade have been established the readers are led into the classical study of calculus continuity differentiation and Riemann integration from first principles The book concludes with an introduction to the study of measures and how one can construct the Lebesgue integral as an extension of the Riemann integral This textbook is aimed at undergraduate students in mathematics As its title suggests it covers a large amount of material which can be taught in around three semesters Many remarks and examples help to motivate and provide intuition for the abstract theoretical concepts discussed In addition more than 600 exercises are included in the book some of which will lead the readers to more advanced topics and could be suitable for independent study projects Since the book is fully self contained it is also ideal for self study

Missile Flight Simulation Jeffrey Strickland, 2015 A missile flight simulation is a computational tool that calculates the flight of a missile from launch until it engages the target The simulation is based on mathematical models of the missile target and environment This book provides instruction for the preparation of these mathematical models to simulate the flight of a surface to air missile The 2nd Edition of *Missile Flight Simulation* provides updated simulation processes using MATLAB R and Simulink TM while improving and clarifying previous content The book may be used as a reference or as a textbook although it is devoid of exercises However the reader is encouraged to perform the simulation of Chapter 12 using MATLAB R and Simulink TM or a programming language such as FORTRAN see Chapter 10 The book is not intended to be a missile flight engineering reference and does not contain every aspect of missile flight It provides the appropriate content for simulating missile flight from launch to terminus only
