P. Laible, C. A. Brebbia, W. Gray, G. Pinder, 2013-04-17 This book is the edited proceedings of the Fifth International Conference on Finite Elements in Water Resources held at the University of Vermont USA in June 1984 This Conference continues the successful series started at Princeton University in 1976 followed by the Conference in Imperial College London UK in 1978 the third Conference at the University of Mississippi USA in 1980 and the fourth at the University of Hannover Germany in 1982 The objective of this Conference is to provide engineers and scientists interested in water resources with the state of the art on finite element modelling The Proceedings review the basic theory and applications of the technique in groundwater and seepage transport phenomena viscous flow river lake and ocean modelling The fundamentals of the numerical techniques employed in finite elements are also discussed Many applications illustrate the versatility and generality of the Finite Element Method for the simulation of a wide range of problems in water resources More recent schemes in particular boundary elements are also presented together with a series of advanced numerical techniques The Conference has become an internationally accepted forum for the presentation of new developments of finite elements in water resources techniques Because of this a large number of abstracts were submitted to the Organizing Committee and it is our only regret that it was impossible to accept all these contributions The overwhelming response to our Call for Papers has ensured the high quality of these proceedings *IUTAM Symposium on Computational Methods for Unbounded Domains* Thomas L. Geers, 2013-03-09 During 27-31 July 1997 thirty seven researchers in acoustics aeronautics

elastodynamics electromagnetics hydrodynamics and mathematics participated in a Symposium on Computational Methods for Unbounded Domains The symposium was sponsored by the International Union of Theoretical and Applied Mechanics and was held at the University of Colorado in the United States of America The symposium was opened by Dr Richard Byyny Chancellor of the University's Boulder Campus who concluded his remarks by reading a letter from Professor Bruno A Boley JUTAM Representative on the Scientific Committee Thirty three papers were presented About two thirds of these focused on the classical wave equation of acoustics however three papers dealt with hydrodynamic surface waves two with electromagnetic waves three with elastodynamic waves and four with waves in aerodynamics Approximately two thirds of the papers addressed steady state problems with the rest treating problems in the time domain Extended abstracts of the papers appear in this volume arranged in alphabetical order according to the last name of the presenting author A key unifying aspect of the symposium was the creation of four working groups that labored in parallel to formulate benchmark problems for evaluating computational boundaries The working groups reviewed the papers presented each day searching for benchmark candidates Then they considered other possibilities and organized the ensemble into logical categories At the end of the symposium each group presented its benchmark candidates to the assembly of participants which subsequently made a preliminary consolidation of the benchmarks
