Van Laethem,Edgard Backx,2013-03-13 In recent years powerful engineering workstations for a reasonable price become a valuable tool for the design of complicated constructions such as shell and spatial structures This availability causes an increasing use of advanced numerical techniques for the static and dynamic analysis of these structures also in the non linear range The I A S S Working Group nO 13 concerned with Numerical Methods in Shell and Spatial Structures and the Department of Civil Engineering of the Katholieke Universiteit Leuven have taken the initiative to organise an International Symposium providing a forum for discussion and exchange of views between researchers specialists in numerical analysis on one hand and designers practising engineer ings on the other hand These Proceedings contain the papers presented at the Symposium held in Leuven July 14 16 1986 The papers are organised in five sections 1 Shell structures 2 Spatial structures 3 Dynamic analysis 4 Non linear analysis 5 Presentation and interpretation of results The papers covering more than one domain are classified following the main subject We hope that researchers as well as practising engineers will find a lot of useful information in the book Review of Literature on the Finite-element Solution of the Equations of Two-dimensional Surface-water Flow in the Horizontal Plane Jonathan K. Lee,David C. Froehlich,1987 **Progress in Computational Analysis of Inelastic Structures** E. Stein,2014-05-04 Five main topics of computational plasticity are treated by experts in the field with latest research results such as consistent linearizations and finite element techniques the numerical analysis for stable volume preserving time integration at the plastic flow rule the analysis and finite element computation of shearband localizations and also of shake down load factors for arbitrary non linear kinematic hardening materials The aim was primarely an integrated representation of the

mathematical models the analysis of numerical methods and the newest algorithms for the consistent and stable computation of large dimensional systems The significance should be seen in the collection of textbook like treatments of important new results from wellknown scientists Advances in Meshfree Techniques V.M.A. Leitaó,C.J.S.
