Whall,1989 For professionals with a career in nursing and or the medical field Designed to help readers understand the development and evaluation of the theoretical base for advanced nursing practice research and education this book familiarizes readers with a broad range of nursing models and their roles in nursing practice **Mental Health-psychiatric Nursing** Ruth Parmelee Rawlins,Sophonra R. Williams,1984 **Alzheimer's Disease** Abraham Fisher,Israel Hanin,Chaim Lachman,2012-12-06 Alzheimer s disease is a primary neurodegenerative disease whose incidence and prevalence is rapidly approaching epidemic proportions A major reason for this is that man is living longer than he has ever lived before and the likelihood of contracting the disease is significantly greater within the elderly portion of the population The problem becomes even more acute in the light of recent estimates which predict that the number of people living beyond the age of 65 is expected to continue to increase The impact of these statistics on the family and the health care industry in terms of time effort and cost are staggering A recent report issued by the Michigan Task Force on Alzheimer s Disease and Related Conditions 1987 effectively underscores this last point Each person with a dementing disease requires an average of seven years of care either at home or in a residential care facility Care provided at home is estimated to cost about 12 000 annually for a total of 84 000 per person This is a conservative figure however because many persons with dementia spend their last few years in a nursing home at an average cost of 22 000 per year and some spend from 10 to 15 years in a nursing home for a total cost of 220 000 to 330 000

Theoretical Nursing Afaf Ibrahim Meleis,2011 An additional assumption was that the processes for theory development were new to nursing and hence nurses in graduate programs learned strategies for advancing knowledge from other disciplines This assumption was debunked with the knowledge that nurses were always engaged in knowledge development driven by their experiences in clinical practice Because of these assumptions most of the early writing about theory development was about outlining strategies that should be used rather than strategies that have already been used in the discipline to develop theories Theorists themselves did not uncover or adequately discuss ways by which they developed their theories therefore the tendency was to describe processes that were based on theories developed in other disciplines mainly the physical and social sciences And an implicit assumption was made that there should be a single strategy for theory development some claiming to begin the process from practice and others believing it should be driven by research Provided by publisher **Psychiatric Nursing in the Hospital and the Community** Ann Wolbert Burgess,1990 **Analysis and Evaluation of Conceptual Models of Nursing** Jacqueline Fawcett,1984
