Osteoporosis Eric S. Orwoll, Michael Bliziotes, 2002-08-02 In *Osteoporosis Pathophysiology and Clinical Management* leading clinicians and researchers join forces to illuminate in coupled chapters all the major scientific and clinical aspects of osteoporosis On the basic science side topics range from the genetics of osteoporosis and bone turnover markers to androgen action in bone to the basic biology of estrogen and bone On the clinical side the authors present the latest thinking about the use of bone densitometry in treatment the use of vitamin D and its metabolites and the clinical utilization of salmon calcitonin as well as parathyroid and bisphosphonate therapies SERMs and other important treatments

Prevention and Management of Osteoporosis World Health Organization, 2003-12-31 Bone is hard tissue that is in a constant state of flux being built up by bone forming cells called osteoblasts while also being broken down or resorbed by cells known as osteoclasts During childhood and adolescence bone formation is dominant bone length and girth increase with age ending at early adulthood when peak bone mass is attained Males generally exhibit a longer growth period resulting in bones of greater size and overall strength In males after the age of 20 bone resorption becomes predominant and bone mineral content declines about 4% per decade Females tend to maintain peak mineral content until menopause at which time it declines about 15% per decade Osteoporosis is a disease characterized by low bone mass and structural deterioration of bone tissue leading to bone fragility and an increased susceptibility to fractures especially of the hip spine and wrist Osteoporosis occurs primarily as a result of normal ageing but can arise as a result of impaired development of peak bone mass e.g. due to delayed puberty or undernutrition or excessive bone loss during adulthood e.g. due to estrogen deficiency in women undernutrition or corticosteroid use Osteoporosis induced fractures cause a great burden to society Hip fractures are the most serious as they nearly always result in hospitalization are fatal about 20% of the time and produce permanent disability about half the time Fracture rates increase rapidly with age and the lifetime risk of fracture in 50 year old women is about 40% similar to that for coronary heart disease In 1990 there were 1.7 million hip fractures alone worldwide with changes in population

demographics this figure is expected to rise to 6 million by 2050 To help describe the nature and consequences of osteoporosis as well as strategies for its prevention and management a WHO Scientific Group meeting of international experts was held in Geneva which resulted in this technical report This monograph describes in detail normal bone development and the causes and risk factors for developing osteoporosis The burden of osteoporosis is characterized in terms of mortality morbidity and economic costs Methods for its prevention and treatment are discussed in detail for both pharmacological and non pharmacological approaches For each approach the strength of the scientific evidence is listed The report also provides cost analysis information for potential interventions and discusses important aspects of developing national policies to deal with osteoporosis Recommendations are made to the general population care providers health administrators and researchers Lastly national organizations and support groups are listed by country

Osteoporosis Robert A. Adler, 2009-12-14 Osteoporosis is a widespread disorder with significant worldwide health and economic impact In the second edition of the highly successful Osteoporosis Pathophysiology and Clinical Management new editor Robert A Adler MD uses the same approach as the first edition pairing a chapter on the basic science of a disorder followed by a chapter on its clinical aspects Updated and expanded this second edition includes many new chapters reflecting the growing literature on osteoporosis New topics cover such areas as methods of bone imaging screening for osteoporosis adherence to therapy and even a novel and exciting chapter on osteoporosis in men to name just several In Osteoporosis Pathophysiology and Clinical Management Second Edition leading experts in a variety of fields have once again provided a wealth of invaluable state of the art information to illuminate the major scientific and clinical aspects of osteoporosis

Encyclopedia of Medical Anthropology Carol R. Ember, Melvin Ember, 2003-12-31 Medical practitioners and the ordinary citizen are becoming more aware that we need to understand cultural variation in medical belief and practice The more we know how health and disease are managed in different cultures the more we can recognize what is culture bound in our own medical belief and practice The Encyclopedia of Medical Anthropology is unique because it

is the first reference work to describe the cultural practices relevant to health in the world's cultures and to provide an overview of important topics in medical anthropology. No other single reference work comes close to matching the depth and breadth of information on the varying cultural background of health and illness around the world. More than 100 experts, anthropologists and other social scientists have contributed their firsthand experience of medical cultures from around the world.

Coaching Children Kelly Sumich, 2013-05-01 Coaching Children Sports science essentials is the first book in Australia specifically aimed at helping community coaches and fitness professionals design safe and effective training programs for children. As obesity rates soar and levels of physical activity decline, this timely resource provides guidance for enhancing children's engagement in sport, developing their motor skills and managing performance anxiety. It provides straightforward, research-based advice on nutrition and explains in clear terms how to tailor exercise to address children's social, physical and psychological needs. A quick find resource with application to both individual and team activities, Coaching Children presents technical information in a highly practical and reader-friendly manner. Everyday questions and answers include: At what age should children specialise in a particular sport? Do sports drinks enhance children's performance? Should children do weight training? How often should children train? Focusing on effective communication strategies with both children and their parents, each chapter includes a list of insightful, reflective questions. Coaches are encouraged to apply scientific knowledge to motivate children in all aspects of training and competing in sport.
