Nutritional Toxicity: Physiology, Nutrition, and Human Health Tingting Ju, Siddika Yalcin, Misha Vrolijk, 2025-08-20 Food is a basic human need Our diet provides the human body with nutrients and other elements that are necessary for maintaining a good health Sufficient intake of nutrients is therefore considered vital However in the past years the environmental impact on our food and an increased adherence to the Westernized diet which consists of ultra processed foods have negatively impacted the quality of our food and thus also our nutrition In addition to these influences today's food is produced differently and food patterns change and shift towards more sustainable diets A major change from animal meat to more plant based foods is occurring whilst new protein sources are introduced such as insects seaweed and artificial protein sources Food additives such as artificial sweeteners are also becoming increasingly popular These environmental and sustainable developments have led to the introduction of new foods different proportions of nutrients in our foods and new elements to our food that altogether are potentially harmful for our health Growing interest in the use of nutrient supplements also introduces potential risks with consuming levels of nutrients above those deemed tolerable or safe Therefore having a better understanding of nutritional toxicity in the context of the modern food industry becomes fundamental
