Building from Tradition Elizabeth Golden (Architect), 2018 Building from Tradition examines the recent resurgence of interest in the handmade building and the use of local and renewable materials in contemporary construction In the past raw materials were shaped to provide shelter and to accommodate the cultural social and economic needs of individuals and communities This is still true today as architects engineers and builders turn once again to local resources and methods not simply for constructing buildings but also as a strategy for supporting social engagement sustainable development and cultural continuity Building from Tradition features global case studies that allow readers to understand how building practices developed and refined by previous generations continue to be adapted to suit a broad range of cultural and environmental contexts The book provides a survey of historical and technical information about geologic and plant based materials such as stone earth reed and grass wood and bamboo 24 detailed case studies examining the disadvantages and benefits to using traditional materials and methods and how they are currently being integrated with contemporary construction practices
