Modelling The Middle Ages The History And Theory Of Englands Economic Development:

Modelling the Middle Ages John Hatcher (historicus.),2002 *Modelling the Middle Ages* John Hatcher,Mark Bailey,2001 This book surveys the most influential theoretical approaches adopted for the study of medieval economy and society It offers an accessible introduction to medieval economic history an up to date critique of established models and a succinct treatise on historiographical method The Economy of Medieval Wales, 1067-1536 Matthew Frank Stevens,2019-10-01 This book surveys the economy of Wales from the first Norman intrusions of 1067 to the Act of Union of England and Wales in 1536 Key themes include the evolution of the agrarian economy the foundation and growth of towns the adoption of a money economy English colonisation and economic exploitation the collapse of Welsh social structures and rise of economic individualism the disastrous effect of the Glynd r rebellion and ultimately the alignment of the Welsh economy to the English economy Comprising four chapters a narrative history is presented of the economic history of Wales 1067 1536 and the final chapter tests the applicability in a Welsh context of the main theoretical frameworks that have been developed to explain long term economic and social change in medieval Britain and Europe *The Origin of Capitalism in England, 1400-1600* Spencer Dimmock,2014-06-05 Incorporating original archival research and a series of critiques of recent accounts of economic development in pre modern England in *The Origin of Capitalism in England 1400 1600* Spencer Dimmock has produced a challenging and multi layered account of a historical rupture in English feudal society which led to the first sustained transition to agrarian capitalism and consequent industrial revolution Genuinely integrating political social and economic themes Spencer Dimmock views capitalism broadly as a form of society rather than narrowly as an economic system He firmly locates its beginnings with conflicting social agencies in a closely defined historical context rather than with evolutionary and transhistorical commercial developments and will thus stimulate a thorough reappraisal of current orthodoxies on the transition to capitalism **Roles of the Sea in Medieval England** Richard Gorski,2012 A fresh assessment of seaborne activity around England in the later middle ages offering a fresh perspective on its rich maritime heritage England s relationship with the sea in the later Middle Ages has been unjustly neglected a gap which this volume seeks to fill The physical fact of the kingdom s insularity made the seas around England fundamentally important to its development within the British Isles and in relation to mainland Europe At times they acted as barriers but they also and more often served as highways of exchange transport and communication and it is this aspect which the essays collected here emphasise Mindful that the exploitation of the sea required specialist technology and personnel and that England s maritime frontiers raised serious issues of jurisdiction security and international diplomacy the chapters explore several key roles performed by the sea during the period c 1200 c 1500 Foremost among them is war the infrastructure logistics politics and personnel of English seaborne expeditions are assessed most notably for the period of the Hundred Years War What emerges from this is a demonstration of the sophisticated but not infallible methods of raising and using ships men and material for

war in a period before England possessed a permanent navy The second major facet of England's relationship with the sea was the generation of wealth this is addressed in its own right and as an intrinsic aspect of warfare and piracy RICHARD GORSKI is Philip Nicholas Memorial Lecturer in Maritime History at the University of Hull Contributors Richard Gorski Richard W Unger Susan Rose Craig Lambert David Simpkin Tony K Moore Marcus Pitcaithly Tim Bowly Ian Friel

Mortality, Trade, Money and Credit in Late Medieval England (1285-1531) Pamela Nightingale, 2020-07-21 The eleven articles in this volume examine controversial subjects of central importance to medieval economic historians Topics include the relative roles played by money and credit in financing the economy whether credit could compensate for shortages of coin and whether it could counteract the devastating mortality of the Black Death Drawing on a detailed analysis of the Statute Merchant and Staple records the articles chart the chronological and geographical changes in the economy from the late thirteenth to the early sixteenth centuries This period started with the triumph of English merchants over alien exporters in the early 1300s and concluded in the early 1500s with cloth exports overtaking wool in value The articles assess how these changes came about as well as the degree to which both political and economic forces altered the pattern of regional wealth and enterprise in ways which saw the northern towns decline and London rise to be the undisputed financial as well as the political capital of England

The Medieval Clothier John S. Lee, 2018 A clear and accessibly written guide to the medieval cloth making trade in England Cloth making became England's leading industry in the late Middle Ages clothiers coordinated its different stages in some cases carrying out the processes themselves and found markets for their finished cloth selling to merchants drapers and other traders While many clothiers were of only modest status or jacks of all trades a handful of individuals amassed huge fortunes through the trade becoming the multi millionaires of their day This book offers the first recent survey of this hugely important and significant trade and its practitioners examining the whole range of clothiers across different areas of England and exploring their impact within the industry and in their wider communities Alongside the mechanics of the trade it considers clothiers as entrepreneurs and early capitalists employing workers and even establishing early factories it also looks at their family backgrounds and their roles as patrons of church rebuilding and charitable activities It is completed with extracts from clothiers wills and a gazetteer of places to visit making the book invaluable to academics students and local historians alike JOHN S LEE is a Research Associate at the Centre for Medieval Studies at the University of York

Medieval Statistics Mark Casson, John S. Lee, 2024-12-26 This book is the first to systematically examine the sources of medieval statistics It will be useful as a handbook for researchers in financial and cultural history as a history of financial record keeping and as a review of recent research into medieval finance and accounting based on statistical sources Medieval statistics provide a unique window on the past Medieval documents produced by royal governments monastic and ecclesiastical institutions urban boroughs and legal cases for debt recovery provide a mine of useful information on economic life and financial affairs They show that medieval administration was far

more numerate and far more sophisticated than is usually recognized This book provides a comprehensive review of the key sources written by leading experts in the field The strengths and weaknesses of each source are reviewed using original documents for illustration and discussing examples from the recent literature The book is mainly concerned with English statistics as they have survived particularly well in both state and private records but which showcase the potential of digital technology in enabling systematic study of medieval primary sources where large databases can now be compiled from original manuscripts This edited volume will be a valuable tool for those working in financial cultural and political history as it seeks to analyse the various ways in which medieval life was documented numerically and the ways in which this information was used within existing power structures

World of the Small Farmer Patricia Croot, 2017-06-01 This detailed and original study of early modern agrarian society in the Somerset Levels examines the small landholders in a group of sixteen contiguous parishes in the area known as Brent Marsh These were farmers with lifehold tenures and a mixed agricultural production whose activities and outlook are shown to be very different from that of the small peasant farmers of so many general histories Patricia Croot challenges the idea that small farmers failed to contribute to the productivity and commercialization of the early modern economy While the emergence of large capitalist farms was an important development these added to the production of existing small cultivators rather than replacing them The idea that only large scale specialized farmers were involved in agricultural progress or that their contribution alone was enough to account for the great increase in food production by the late 17th century is questioned small farmers continued to make a living contributed to the market and survived alongside the new bigger farms Croot's in depth study not only adds to our knowledge of agrarian society generally but shows that far from being backward and interested primarily in subsistence farming small producers in this area sought profit in making the best use of their resources however limited being flexible in their production and growing new or unusual crops The main land tenures copy and lease for lives are also covered in detail contributing to current debates on landholding and sub tenancy The author shows the uses to which lifehold tenures could be put resulting in the increasing financial strength of copyholders and their dominance in local society The effects of the tenure and profits of farming can be seen in the way that families were provided for as well as in the roles that women played and the responsibility they had in economic and social life while the wider interests of the inhabitants are shown in their religious and political engagement in events of the 17th century Patricia Croot's meticulous study is a valuable contribution to English agrarian history and in particular to the history of this under researched region

Decision-Making in Medieval Agriculture David Stone, 2005-09-29 This fascinating and important book uses a wealth of contemporary sources to reconstruct the mental world of medieval farmers and by doing so argues that these key figures in the Middle Ages have been unfairly stereotyped David Stone overturns the traditional view of medieval countrymen as economically backward and instead reveals that agricultural decision making was as rational in the fourteenth century as in modern times Investigating

agricultural mentalities first at a local level and then for England as a whole Dr Stone argues that human action shaped the course of the rural economy to a much greater extent than has hitherto been appreciated and challenges the commonly held view that the medieval period was dominated by ecological and economic crises Focusing in particular on responses to commercial forces and the adoption of agricultural technology this book has significant implications for our understanding of agricultural development throughout the last thousand years
