Number Theory And Its Applications In China:

   Number Theory and Its Applications in China Yuan Wang,1988 Emphasizes the accomplishments of Chinese number theorists during 1949 1979 a period when correspondence between China and other countries was discouraged This work presents a survey of the significant contributions of Chinese mathematicians It also reflects the developments and state of research in number theory in China   **Number Theory and Its Applications in China** Yuan Wang,Chung-Chun Yang,Cheng biao Pan,1988-12-31 Of all modern mathematical forms number theory is one of the earliest to be explored in China and is the one to which the Chinese have made their greatest contributions Yan Wu zhi first introduced number theory into China in the 1920s Particularly influential in the field was Hua Loo keng who studied with G H Hardy and made significant contributions in the areas estimating complete exponential sums Waring s problems Tarry s problems and Vinogradov s method Interest in number theory continued to flourish following the founding of the People s Republic of China The most noted accomplishments by Chinese mathematicians were focused on the solution of Goldbach s Conjecture and on the sieve method Although the Cultural Revolution interrupted research in number theory for more than 10 years the field is now growing in China A number of universities now have advanced programs in the subject and a wide variety of topics including the applications of number theory This volume contains nine survey articles and three articles on current research The collection emphasizes the accomplishments of Chinese number theorists during 1949 1979 a period when correspondence between China and other countries was discouraged The collection is intended not only to survey the significant contributions of Chinese mathematicians but also to reflect the latest developments and current state of research in number theory in China   Number Theory And Its Applications Ii Hailong Li,Fuhuo Li,Nianliang Wang,Shigeru Kanemitsu,2017-11-29 The aim of the book is to give a smooth analytic continuation from basic subjects including linear algebra group theory Hilbert space theory etc to number theory With plenty of practical examples and worked out exercises and the scope ranging from these basic subjects made applicable to number theoretic settings to advanced number theory this book can then be read without tears It will be of immense help to the reader to acquire basic sound skills in number theory and its applications Number theory used to be described as the queen of mathematics that is there is no practical use However with the development of computers and the security of internet communications the importance of number theory has been exponentially increasing daily The raison d tre of the present book in this situation is that it is extremely reader friendly while keeping the rigor of serious mathematics and in depth analysis of practical applications to various subjects including control theory and pseudo random number generation The use of operators is prevailing rather abundantly in anticipation of applications to electrical engineering allowing the reader to master these skills without much difficulty It also delivers a very smooth bridging between elementary subjects including linear algebra and group theory and algebraic number theory for the reader to be well versed in an efficient and effortless way One of the main features of the book is that

it gives several different approaches to the same topic helping the reader to gain deeper insight and comprehension Even just browsing through the materials would be beneficial to the reader   <u>Selected Papers of Wang Yuan</u> Yuan Wang,2005 This volume presents a comprehensive collection of Wang YuanOCOs original important papers which are not available elsewhere since the majority of the papers were published in China Covering both pure number theory and applied mathematics this book is important for understanding Wang YuanOCOs academic career and also the development of Chinese mathematics in recent years since Wang YuanOCOs work has a wide ranging influence in China Wang Yuan is a professor and academician of the Chinese Academy of Sciences He received his honorable Doctorship from Hong Kong Baptist University He has published 70 papers and ten books   **Handbook of Number Theory I** József Sándor,Dragoslav S. Mitrinovic,Borislav Crstici,2005-11-17 This handbook covers a wealth of topics from number theory special attention being given to estimates and inequalities As a rule the most important results are presented together with their refinements extensions or generalisations These may be applied to other aspects of number theory or to a wide range of mathematical disciplines Cross references provide new insight into fundamental research Audience This is an indispensable reference work for specialists in number theory and other mathematicians who need access to some of these results in their own fields of research   **Proceedings of the International Conference on Algebra Dedicated to the Memory of A. I. Mal$'$cev** Leonid A. Bokut',A. I. Kostrikin,1992   *The Connection between Infinite Dimensional and Finite Dimensional Dynamical Systems* Basil Nicolaenko,Ciprian Foiaş,Roger Temam,1989 The last few years have seen a number of major developments demonstrating that the long term behavior of solutions of a very large class of partial differential equations possesses a striking resemblance to the behavior of solutions of finite dimensional dynamical systems or ordinary differential equations The first of these advances was the discovery that a dissipative PDE has a compact global attractor with finite Hausdorff and fractal dimensions More recently it was shown that some of these PDEs possess a finite dimensional inertial manifold that is an invariant manifold containing the attractor and exponentially attractive trajectories With the improved understanding of the exact connection between finite dimensional dynamical systems and various classes of dissipative PDEs it is now realistic to hope that the wealth of studies of such topics as bifurcations of finite vector fields and strange fractal attractors can be brought to bear on various mathematical models including continuum flows Surprisingly a number of distributed systems from continuum mechanics have been found to exhibit the same nontrivial dynamic behavior as observed in low dimensional dynamical systems As a natural consequence of these observations a new direction of research has arisen detection and analysis of finite dimensional dynamical characteristics of infinite dimensional systems This book represents the proceedings of an AMS IMS SIAM Summer Research Conference held in July 1987 at the University of Colorado at Boulder Bringing together mathematicians and physicists the conference provided a forum for presentations on the latest developments in the field and fostered lively interactions on open questions and future directions With contributions from some of the top experts

these proceedings will provide readers with an overview of this vital area of research **Geometry and Nonlinear Partial Differential Equations** Vladimir Oliker,Andrejs Treibergs,American Mathematical Society. Meeting,1992 This volume contains the proceedings of an AMS Special Session on Geometry Physics and Nonlinear PDEs The conference brought together specialists in Monge Ampere equations prescribed curvature problems mean curvature harmonic maps evolution with curvature dependent speed isospectral manifolds and general relativity An excellent overview of the frontiers of research in these areas **Mathematics of Nonlinear Science** Melvyn Stuart Berger,1990 Contains the proceedings of an AMS Special Session on the Mathematics of Nonlinear Science held in Phoenix in January 1989 The area of research encompasses a large and rapidly growing set of ideas concerning the relationship of mathematics to science in which the fundamental laws of nature are extended beyond common sense into new areas where the dual aspects of order and chaos abound **Surveys in Number Theory** Bruce Berndt,2002-11-20 This volume based on fourteen papers from the Millennial Conference on Number Theory represents surveys of topics in number theory and provides an outlook into the future of number theory research It serves as an inspiration to graduate students and as a reference for research mathematicians New Approaches in Spectral Decomposition Ridgley Lange,Shengwang Wang,1992 Aimed at a general mathematical audience this book provides a careful exposition of developments in the theory of spectral decomposition Bringing the reader from the basics up to the level of current research in the area at the time of writing Lange and Wang present an accessible account of the techniques used in the theory and applications of decomposable operators and related classes of operators The book begins with a discussion of criteria for decomposable and related types of operators and an analysis that relates and distinguishes among them Perturbation theory of decomposable and other operators applications to classical Hilberty space operators quasisimilarity and a new class of weakly decomposable operators are also discussed The book closes with an exposition of some classical theories on invariant subspaces for subdecomposable and hyponormal operators and a presentation of the parallel spectral theory of commuting systems **Azumaya Algebras, Actions, and Modules** Darrell Haile,1992 This volume contains the proceedings of a conference in honor of Goro Azumaya s seventieth birthday held at Indiana University of Bloomington in May 1990 Professor Azumaya who has been on the faculty of Indiana University since 1968 has made many important contributions to modern abstract algebra His introduction and investigation of what have come to be known as Azumaya algebras subsequently stimulated much research on such rings and algebras as well as applications to geometry and number theory In addition to honoring Professor Azumaya s contributions the conference was intended to stimulate interaction among three areas of his research interests Azumaya algebras group and Hopf algebra actions and module theory Aimed at researchers in algebra this volume contains contributions by some of the leaders in these areas **Current Progress in Hyperbolic Systems: Riemann Problems and Computations** W. Brent Lindquist,1989 Contains the proceedings of the AMS IMS SIAM Joint Summer Research Conference on Current Progress in

Hyperbolic Systems Riemann Problems and Computations held at Bowdoin College in July 1988   *A History of Chinese Mathematics* Jean-Claude Martzloff,2007-08-17 Since the end of the 19th century a number of specialised journals albeit with a large audience have regularly included articles on the history of Chinese mathematics while a number of books on the history of mathematics include a chapter on the subject Thus the progressive increase in our knowledge of the content of Chinese mathematics has been accompanied by the realisation that as far as results are concerned there are numerous similarities between Chinese mathematics and other ancient and medieval mathematics For example Pythagoras theorem the double false position rules Hero s formulae and Ruffini Harner s method are found almost everywhere As far as the reasoning used to obtain these results is concerned the fact that it is difficult to find rational justifications in the original texts has led to the reconstitution of proofs using appropriate tools of present day elementary algebra Consequently the conclusion that Chinese mathematics is of a fundamentally algebraic nature has been ventured However in recent decades new studies particularly in China and Japan have adopted a different approach to the original texts in that they have considered the Chinese modes of reasoning as these can be deduced from the rare texts which contain justifications By studying the results and the methods explicitly mentioned in these texts hand in hand this Chinese and Japanese research has attempted to reconstruct the conceptions of ancient authors within a given culture and period without necessarily involving the convenient but often distorting social and conceptual framework of present day mathematics   Finite Geometries and Combinatorial Designs Earl Sidney Kramer,1990 The proceedings of an AMS special session on finite geometries and combinatorial designs Topics range over finite geometry combinatorial designs their automorphism groups and related structures   **Abelian Groups and Noncommutative Rings: A Collection of Papers in Memory of Robert B. Warfield, Jr.** László Fuchs,1992 This collection of research papers is dedicated to the memory of the distinguished algebraist Robert B Warfield Jr Focusing on abelian group theory and noncommutative ring theory the book covers a wide range of topics reflecting Warfield s interests and includes two articles surveying his contributions to mathematics Because the articles have been refereed to high standards and will not appear elsewhere this volume is indispensable to any researcher in noncommutative ring theory or abelian group theory With papers by some of the major leaders in the field this book will also be important to anyone interested in these areas as it provides an overview of current research directions   *Mathematical Developments Arising from Linear Programming* Jeffrey C. Lagarias,Michael J. Todd,1990 There has been much recent work in linear and non linear programming centred on understanding and extending the ideas underlying Karmarkar s interior point linear programming algorithm This volume is the result of an AMS conference on mathematical developments arising from linear programming   Dynamics and Control of Multibody Systems Perinkulam Sambamurthy Krishnaprasad,Juan C. Simo,1989 The study of complex interconnected mechanical systems with rigid and flexible articulated components is of growing interest to both engineers and mathematicians Recent work in this area reveals a rich geometry underlying the mathematical

models used in this context In particular Lie groups of symmetries reduction and Poisson structures play a significant role in explicating the qualitative properties of multibody systems In engineering applications it is important to exploit the special structures of mechanical systems For example certain mechanical problems involving control of interconnected rigid bodies can be formulated as Lie Poisson systems The dynamics and control of robotic aeronautic and space structures involve difficulties in modeling mathematical analysis and numerical implementation For example a new generation of spacecraft with large flexible components are presenting new challenges to the accurate modeling and prediction of the dynamic behavior of such structures Recent developments in Hamiltonian dynamics and coupling of systems with symmetries has shed new light on some of these issues while engineering questions have suggested new mathematical structures These kinds of considerations motivated the organization of the AMS IMS SIAM Joint Summer Research Conference on Control Theory and Multibody Systems held at Bowdoin College in August 1988 This volume contains the proceedings of that conference The papers presented here cover a range of topics all of which could be viewed as applications of geometrical methods to problems arising in dynamics and control The volume contains contributions from some of the top researchers and provides an excellent overview of the frontiers of research in this burgeoning area **Enumerative Algebraic Geometry** Steven L. Kleiman,Anders Thorup,1991 1989 marked the 150th anniversary of the birth of the great Danish mathematician Hieronymus George Zeuthen Zeuthen s name is known to every algebraic geometer because of his discovery of a basic invariant of surfaces However he also did fundamental research in intersection theory enumerative geometry and the projective geometry of curves and surfaces Zeuthen s extraordinary devotion to his subject his characteristic depth thoroughness and clarity of thought and his precise and succinct writing style are truly inspiring During the past ten years or so algebraic geometers have reexamined Zeuthen s work drawing from it inspiration and new directions for development in the field The 1989 Zeuthen Symposium held in the summer of 1989 at the Mathematical Institute of the University of Copenhagen provided a historic opportunity for mathematicians to gather and examine those areas in contemporary mathematical research which have evolved from Zeuthen s fruitful ideas This volume containing papers presented during the symposium as well as others inspired by it illuminates some currently active areas of research in enumerative algebraic geometry **Harmonic Analysis and Partial Differential Equations** Mario Milman,Tomas Schonbek,1990 Illuminates the relationship between harmonic analysis and partial differential equations This book covers topics such as application of fully nonlinear uniformly elliptic equations to the Monge Ampere equation and estimates for Green functions for the purpose of studying Dirichlet problems for operators in non divergence form
