 2023 Educational Weekly ,1878 *Math Circle by the Bay* Laura Givental,Maria Nemirovskaya,Ilya
 Zakharevich,2018-12-14 This book is based on selected topics that the authors taught in math circles for elementary school
 students at the University of California Berkeley Stanford University Dominican University Marin County CA and the
 University of Oregon Eugene It is intended for people who are already running a math circle or who are thinking about
 organizing one It can be used by parents to help their motivated math loving kids or by elementary school teachers We also
 hope that bright fourth or fifth graders will be able to read this book on their own The main features of this book are the
 logical sequence of the problems the description of class reactions and the hints given to kids when they get stuck This book
 tries to keep the balance between two goals inspire readers to invent their own original approaches while being detailed
 enough to work as a fallback in case the teacher needs to prepare a lesson on short notice It introduces kids to combinatorics
 Fibonacci numbers Pascal s triangle and the notion of area among other things The authors chose topics with deep
 mathematical context These topics are just as engaging and entertaining to children as typical recreational math problems
 but they can be developed deeper and to more advanced levels In the interest of fostering a greater awareness and
 appreciation of mathematics and its connections to other disciplines and everyday life MSRI and the AMS are publishing
 books in the Mathematical Circles Library series as a service to young people their parents and teachers and the
 mathematics profession
