Food and nutrition security in Addis Ababa, Ethiopia during COVID-19 pandemic: May 2020 report Hirvonen, Kalle, Abate, Gashaw T., de Brauw, Alan, 2020-05-14 We called by telephone a representative sample of 600 households in Addis Ababa Ethiopia to assess household food and nutrition security status during the COVID 19 pandemic More than half the households indicated that their incomes were lower than expected and more than one third reported that they are extremely stressed about the situation Using a pre pandemic wealth index we find that less wealthy households were considerably more likely to report income losses and high stress levels than were wealthier households Compared to a period just before the pandemic January and February 2020 indicators measuring food security have significantly worsened In April households were less frequently consuming relatively more expensive but

nutritionally richer foods such as fruit and dairy products However overall food security status in Addis Ababa is not yet alarming possibly because most households have used their savings to buffer food consumption It is likely that these savings will not last for much longer calling for a rapid scale up of existing support programs

Nutrition and Economic Development in the Eighteenth-Century Habsburg Monarchy John Komlos,2014-07-14 John Komlos examines the industrial expansion of Austria from a fresh viewpoint and develops a new model for the industrial revolution By integrating recent advances in the study of human biology and nutrition as they relate to physical stature population growth and levels of economic development he reveals an intense Malthusian crisis in the Habsburg lands during the second half of the eighteenth century At that time food shortages brought about by the accelerated population growth of the 1730s forced the government to adopt a reform program that opened the way for the beginning of the industrial revolution in Austria and in the Czech Crownlands Comparing this Austrian model of economic growth to the industrial revolution in Britain Komlos argues that the model is general enough to explain demographic and economic growth elsewhere in Europe despite obvious regional differences The main feature of the model is the interplay between a persistent even if small tendency to accumulate capital and a population with an underlying tendency to grow in numbers while remaining subject to Malthusian checks particularly a limited availability of food According to Komlos modern economic growth in Europe began when the food constraint was finally lifted Originally published in 1989 The Princeton Legacy Library uses the latest print on demand technology to again make available previously out of print books from the distinguished backlist of Princeton University Press These editions preserve the original texts of these important books while presenting them in durable paperback and hardcover editions The goal of the Princeton Legacy Library is to vastly increase access to the rich scholarly heritage found in the thousands of books published by Princeton University Press since its founding in 1905
