Primary Care Nutrition David Heber, Zhaoping Li, 2017-07-14 This book contains the necessary knowledge and tools to incorporate nutrition into primary care practice As a practical matter this effort is led by a dedicated primary care physician with the help of motivated registered dietitians nurses psychologists physical therapists and office staff whether within a known practice or by referral

to the community It is essential that the nutrition prescription provided by the physician be as efficient as possible While many team members have superior knowledge in the areas of nutrition exercise and psychology the health practitioner remains the focus of patient confidence in a therapy plan Therefore the endorsement of the plan rather than the implementation of the plan is the most important task of the physician This book proposes a significant change in attitude of primary health care providers in terms of the power of nutrition in prevention and treatment of common disease It features detailed and referenced information on the role of nutrition in the most common conditions encountered in primary care practice In the past treatment focused primarily on drugs and surgery for the treatment of disease with nutrition as an afterthought Advanced technologies and drugs are effective for the treatment of acute disease but many of the most common diseases such as heart disease diabetes and cancer are not preventable with drugs and surgery While there is mention of prevention of heart disease this largely relates to the use of statins with some modest discussion of a healthy diet Similarly prevention of type 2 diabetes is the early introduction of metformin or intensive insulin therapy
