## **Shared Destiny Community Effects Of Uninsurance:**

A Shared Destiny Institute of Medicine, Board on Health Care Services, Committee on the Consequences of Uninsurance, 2003-03-05 A Shared Destiny is the fourth in a series of six reports on the problems of uninsurance in the United States This report examines how the quality quantity and scope of community health services can be adversely affected by having a large or growing uninsured population It explores the overlapping financial and organizational basis of health services delivery to uninsured and insured populations the effects of community uninsurance on access to health care locally and the potential spillover effects on a community's economy and the health of its citizens The committee believes it is both mistaken and dangerous to assume that the persistence of a sizable uninsured population in the United States harms only those who are uninsured

America's Uninsured Crisis Institute of Medicine, Board on Health Care Services, Committee on Health Insurance Status and Its Consequences, 2009-07-01 When policy makers and researchers consider potential solutions to the crisis of uninsurance in the United States the question of whether health insurance matters to health is often an issue This question is far more than an academic concern It is crucial that U S health care policy be informed with current and valid evidence on the consequences of uninsurance for health care and health outcomes especially for the 45.7 million individuals without health insurance From 2001 to 2004 the Institute of Medicine IOM issued six reports which concluded that being uninsured was hazardous to people's health and recommended that the nation move quickly to implement a strategy to achieve health insurance coverage for all The goal of this book is to inform the health reform policy debate in 2009 with an up to date assessment of the research evidence This report addresses three key questions What are the dynamics driving downward trends in health insurance coverage Is being uninsured harmful to the health of children and adults Are insured people affected by high rates of uninsurance in their communities

**A Population-Based Policy and Systems Change Approach to Prevent and Control**

**Hypertension** Institute of Medicine, Board on Population Health and Public Health Practice, Committee on Public Health Priorities to Reduce and Control Hypertension in the U.S. Population, 2010-08-13 Hypertension is one of the leading causes of death in the United States affecting nearly one in three Americans It is prevalent in adults and endemic in the older adult population Hypertension is a major contributor to cardiovascular morbidity and disability Although there is a simple test to diagnose hypertension and relatively inexpensive drugs to treat it the disease is often undiagnosed and uncontrolled A Population Based Policy and Systems Change Approach to the Prevention and Control Hypertension identifies a small set of high priority areas in which public health officials can focus their efforts to accelerate progress in hypertension reduction

and control It offers several recommendations that embody a population based approach grounded in the principles of measurement system change and accountability The recommendations are designed to shift current hypertension reduction strategies from an individual based approach to a population based approach They are also designed to improve the quality of care provided to individuals with hypertension and to strengthen the Center for Disease Control and Prevention s leadership in seeking a reduction in the sodium intake in the American diet to meet dietary guidelines The book is an important resource for federal public health officials and organizations especially the Center for Disease Control and Prevention as well as medical professionals and community health workers More than Ramps Lisa I. Iezzoni, Bonnie L. O'Day, 2010-04-10 Nearly twenty percent of Americans live today with some sort of disability and this number will grow in coming decades as the population ages Despite this the U S health care system is not set up to provide care comfortably safely and efficiently to persons with disabilities Individuals with disabilities can therefore face significant barriers to obtaining high quality health care Some barriers result from obvious impediments such as doors without automatic openers and examining tables that are too high Other barriers arise from faulty communication between patients and health care professionals including misconceptions among clinicians about the daily lives preferences values and abilities of persons with disabilities Yet additional barriers relate to health insurance limits on items and services essential to maximizing health and independence This book examines the health care experiences of persons who are blind deaf hard of hearing or who have difficulties using their legs arms or hands The book then outlines strategies for overcoming or circumventing barriers to care starting by just asking persons with disabilities about workable solutions Creating safe and accessible health care for persons with disabilities will likely benefit everyone at some point This book has three parts The first part looks at the historical roots of healthcare access for persons with disabilities in the United States The second part discusses the current situation and the special challenges for those with disabilities The third part looks forward to discuss the ways in which healthcare quality and access can improve
