Unemployment is one of the most politically explosive issues in China and has gained further prominence as a result of the present global financial crisis The novelty urgency and complexity of Chinese unemployment have compelled the government to experiment with policy initiatives that originate in the West This book argues that although China is not a liberal democracy it has turned to neo liberal forms of governance to deal with unemployment which now function alongside pre existing Chinese modes of governance This book examines the initiatives which represent China s attempt to institutionalize and humanize its approach to governance these initiatives include training programmes counselling a web based national labour market information network insurance and using community shequ organizations as the base for new mechanisms of governance and informal job generation Based on extensive original research including semi structured interviews the book discusses the ways in which the government combines the new techniques with old campaign style policy techniques The author argues that these multiple modes of governance make the state s power visible in the new Chinese labour market and at the same time run the risk of policy incoherence or even failure

Soares,Neville A. Stanton,2011-06-22 Every day we interact with thousands of consumer products We not only expect them

to perform their functions safely reliably and efficiently but also to do it so seamlessly that we don't even think about it. However, with the many factors involved in consumer product design from the application of human factors and ergonomics principles to reducing risks of malfunction and the total life cycle cost, the process just seems to get more complex. Edited by well-known and well-respected experts, the two volumes of *Handbook of Human Factors and Ergonomics in Consumer Product Design* simplify this process. The first volume, *Human Factors and Ergonomics in Consumer Product Design: Methods and Techniques*, outlines how to incorporate Human Factors and Ergonomics (HF/E) principles and knowledge into the design of consumer products in a variety of applications. It discusses the user-centered design process, starting with how mental workload affects every-day interactions with consumer products and what lessons may be applied to product design. The book then highlights the ever-increasing role of information technology, including digital imaging, video, and other media, and virtual reality applications in consumer product design. It also explores the user-centered aspect of consumer product development with discussions of user-centered vs. task-based approach, articulation and assessment of user requirements and needs, interaction with design models, and eco-design. With contributions from a team of researchers from 21 countries, the book covers the current state-of-the-art methods and techniques of product ergonomics. It provides an increased knowledge of how to apply the HF/E principles that ultimately leads to better product design.
