The Collected Papers of Lord Rutherford of Nelson Ernest Rutherford,2014-05-09 This is the first of three volumes which together contain the complete range of Lord Rutherford s scientific papers incorporating in addition addresses general lectures letters to editors accounts of his scientific work and personal recollections by friends and colleagues Volume one first published in 1962 includes early papers written in New Zealand at the Cavendish Laboratory and during the Montreal period 1894 1906 as well as an introduction to Rutherford s early work by Sir Edward Appleton and some reminiscences of his time in Canada by Professors H L Bronson and Otto Hahn In each volume can be found photographs of Rutherford and his collaborators multiple graphs tables diagrams and charts and also pictures of the original apparatus which is of historic interest *A Guide to the Reports on Collections of Manuscripts of Private Families, Corporations and Institutions in Great Britain and Ireland* Great Britain. Royal Commission on Historical Manuscripts,1938 **The Harvest of a Century** Siegmund Brandt,2009 Physics was the leading science of the twentieth century and the book retraces important discoveries made between 1895 and 2001 in 100 self contained Episodes Each is a short story of the scientists involved their time and their work The book is richly illustrated by about 600 portraits photographs and figures **Otto Hahn and the Rise of Nuclear Physics** W.R. Shea,2012-12-06 and less as the emanation underwent radioactive decay and it became motionless after about 30 seconds Since this process was occurring very rapidly Hahn and Sackur marked the position of the pointer on a scale with pencil marks As a timing device they used a metronome that beat out intervals of approximately 1.3 seconds This simple method enabled them to determine that the half life of the emanations of actinium and emanium were the same Although Giesel s measurements had been more precise than Debierne s the name of actinium was retained since Debierne had made the discovery first Hahn now returned to his sample of barium chloride He soon conjectured that the radium enriched preparations must harbor another radioactive substance The liquids resulting from fractional crystallization which were supposed to contain radium only produced two kinds of emanation One was the long lived emanation of radium the other had a short life similar to the emanation produced by thorium Hahn tried to separate this substance by adding some iron to the solutions that should have been free of radium but to no avail Later the reason for his failure became apparent

The element that emitted the thorium emanation was constantly replenished by the element believed to be radium. Hahn succeeded in enriching a preparation until it was more than 100 000 times as intensive in its radiation as the same quantity of thorium.

Popularization and People (1911-1962), 2013-10-22

The Niels Bohr Collected Works are now complete with the publication of Volume 12 Popularization and People 1911-1962. Niels Bohr is generally regarded as one of the most influential physicists of the twentieth century. The following are only some of the high points. In 1913 Bohr proposed a revolutionary model of the atom breaking with classical conceptions of physics. In 1921 he established the Institute for Theoretical Physics at the University of Copenhagen which became the centre for the new physics visited by the younger generation of physicists from all over the world. From 1927 he oversaw the development leading to the Copenhagen interpretation of quantum mechanics which for Bohr formed the foundation for an epistemology valid beyond physics based on Bohr's complementarity concept. In 1939 he explained the mechanism of nuclear fission. Finally from 1943 until the end of his life in 1962 he carried out a personal political mission to establish an open world between nations which he considered to be necessary in view of the existence of the atomic bomb. All these contributions are amply documented in the earlier volumes of the Niels Bohr Collected Works. This last volume documents Niels Bohr as a person and his efforts to explain quantum physics and its implications to physicists and non-physicists alike. While his activity over many years in the area of superconductivity illustrates his striving for synthesis in physics, his encyclopaedia articles and radio speech for Scandinavian gymnasium students document his effort to make quantum physics and its implications understandable to the general public. The bulk of the volume comprises Bohr's many published writings about his predecessors for example Isaac Newton, teachers and colleagues for example Ernest Rutherford and Albert Einstein, family and friends. These writings which include several rare pieces of autobiography bring new perspectives to Bohr's life and document his substantial social network both internationally and within his beloved Denmark. In addition to Bohr's publications reproduced in Parts I and II, the volume includes a more brief Part III with selected correspondence as well as an inventory of relevant manuscripts. It concludes with a bibliography of Bohr's many publications chronologically arranged with references to where they can be found in the various volumes of the Collected Works. The volume is illustrated with many new photographs.
