Machine Tools for High Performance Machining Norberto Lopez de Lacalle, Aitzol Lamikiz Mentxaka, 2008-10-01 Machine tools are the main production factor for many industrial applications in many important sectors Recent developments in new motion devices and numerical control have lead to considerable technological improvements in machine tools The use of five axis machining centers has also spread resulting in reductions in set up and lead times As a consequence feed rates cutting speed and chip section increased whilst accuracy and precision have improved as well Additionally new cutting tools have been developed combining tough substrates optimal geometries and wear resistant coatings Machine Tools for High Performance Machining describes in depth several aspects of machine structures machine elements and control and application The basics models and functions of each aspect are explained by experts from both academia and industry Postgraduates researchers and end users will all find this book an essential reference

Analysis of Material Removal Processes Warren R. DeVries, 2012-12-06 Metal removal processes cutting and grinding in this book are an integral part of a large number of manufacturing systems either as the primary manufacturing process or as an important part of preparing the tooling for other manufacturing processes In recent years industry and educational institutions have concentrated on the metal removal system perhaps at the expense of the process This book concentrates on metal removal processes particularly on the modeling aspects that can either give a direct answer or suggest the general requirements as to how to control improve or change a metal removal process This modeling knowledge is more important with automated computer controlled systems than it has ever been before because quantitative knowledge is needed to design and operate these systems This senior undergraduate graduate textbook is aimed at providing the quantitative knowledge often times at an elementary level for handling the technological aspects of setting up and operating a metal removal process and interpreting the experience of planning operating and improving a metal removal
